

The Public Schools of Brookline
School Committee Meeting of Thursday, November 29, 2018
Superintendent Report
Andrew J. Bott

District Enrollment and Substandard Spaces

Attached please find a copy of my November 27 memo regarding district enrollment, as well as a copy of the report shared with the Advisory Subcommittee on Tuesday evening regarding overcrowded schools and substandard spaces.

As you know, since December 2016, the Public Schools of Brookline has created and distributed an enrollment projection report designed to be one part of the budget and capital planning process for the School Department, the Town, and Town Boards. Each year the projections in this report are revised due to changes in birth rates, birth to kindergarten progression rates, planned housing developments and the report's methodology.

The underlying need for this report has not changed, as the Public Schools of Brookline remain severely overcrowded. As of October 2018, the public schools have 1,600 more students in the same number of schools than they did in 2005. While creative work by the building department during the expand-in-place effort has limited the impact on class size, the buildings themselves are over-utilized and too small for the number of students being crowded into them.

Over the past 10 years the equivalent of four K-8 schools worth of additional students has been crammed into existing buildings and rented facilities. This has resulted in dramatically overburdened cafeterias, gyms, administration, and other teaching and learning spaces. Spaces needed for contemporary education, such as dedicated rooms for special education, English language instruction, project based learning, and teacher collaboration, that are taken for granted in Brookline's peer communities, are lacking in all of our schools with the exception of Coolidge and are desperately needed for our students to keep pace. Learning spaces and special education classrooms have been carved out of auditoriums, locker rooms, hallways, and windowless storage spaces. Schedules are created based on hallway traffic patterns because passageways are insufficient to handle the number of students. Students are learning in modular classrooms and temporary rental spaces. BEEP students have been systematically removed from our school buildings and placed in rented facilities.

This year's PSB Enrollment Projection Report anticipates a decline in growth in the coming years. Even with these conservative projections, five years from now school enrollment will be more than 1,400 students above what it was in 2005-2006. Ten years from now, projected enrollment remains nearly 1,100 students more than where it was when this growth started. Regardless of enrollment projections, Brookline needs additional capacity today simply to address the current and existing conditions that are subpar and well below what Brookline should expect in its school facilities.

The overcrowding and substandard space memo was written to provide the Town with a better understanding of the school-by-school impacts of these compromised spaces in our schools. The principal narratives in this memo are based on interviews with each principal in which they describe how the overcrowding negatively impacts our ability to educate students.

Launch of the Principal Search Process at Baker, Coolidge Corner and Lawrence Schools

As you are aware, this year we currently have interim school leaders at Baker, Coolidge Corner and Lawrence Schools. We are set to launch the process for the selection of permanent principals at each school. I am presently meeting with parent leaders at these three schools and will follow-up with an announcement to all parents and staff to outline the process and timeline, and offer opportunities for involvement and feedback. We have created a robust search process to help us identify the most qualified candidates who share our commitment to educational equity.

School Visits, Faculty Meetings, PTO Forums and Town Events

Since our last meeting, I have had many opportunities to visit classrooms and schools, and to meet with parents, including:

Classroom Visits:

Brookline High School	November 13
Coolidge Corner	November 14
Heath	November 14
Baker	November 15 and 26
Lawrence	November 19
Runkle	November 29

Faculty Meeting:

I joined Runkle educators at their faculty meeting on Tuesday, November 27.

Parent Meetings:

Tomorrow I look forward to meeting with Coolidge Corner School parents at a coffee hosted by the PTO at 8:15am.

I will be meeting with parents at Runkle on Friday, December 7 and at Pierce on Friday, December 14.

Brookline Chamber of Commerce First Light Celebration

This evening is the First Light holiday celebration in Brookline. Sponsored by the Brookline Chamber of Commerce, First Light marks the festive start to the holiday shopping season and highlights all the town's local businesses. This year, town department heads were invited to participate. Just before this evening's meeting I joined the celebration at the Brookline Bank office in Coolidge Corner to meet town residents and help to kick-off the holiday season.

Innovation Fund Gala:

The Brookline High School Innovation Fund held their signature fundraising event on Thursday, November 15. I was pleased to be able to attend along with BHS Head of School Anthony Meyer.

Rotary Club Gridiron Thanksgiving Luncheon

BHS Head of School Anthony Meyer, Athletic Director Pete Rittenburg, and I attended the annual Rotary Club Gridiron Lunch on Tuesday, November 20. This pre-Thanksgiving tradition features the student athletes from the BHS and Newton North football teams in an annual celebration of their rivalry and good sportsmanship.

RE: District Enrollment Report

Summary

Since December 2016, the Public Schools of Brookline has created and distributed an enrollment projection report designed to be one part of the budget and capital planning process for the School Department, the Town, and Town Boards. Each year the projections in this report are revised due to changes in birth rates, birth to kindergarten progression rates, planned housing developments and the report's methodology.

The underlying need for this report has not changed, as the Public Schools of Brookline remain severely overcrowded. As of October 2018, the public schools have 1,600 more students in the same number of schools than they did in 2005. While creative work by the building department during the expand-in-place effort has limited the impact on class size, the buildings themselves are over-utilized and too small for the number of students being crowded into them.

Over the past 10 years the equivalent of four K-8 schools worth of additional students has been crammed into existing buildings and rented facilities. This has resulted in dramatically overburdened cafeterias, gyms, administration, and other teaching and learning spaces. Spaces needed for contemporary education, such as dedicated rooms for special education, English language instruction, project based learning, and teacher collaboration, that are taken for granted in Brookline's peer communities, are lacking in all of our schools with the exception of Coolidge and are desperately needed for our students to keep pace. Learning spaces and special education classrooms have been carved out of auditoriums, locker rooms, hallways, and windowless storage spaces. Schedules are created based on hallway traffic patterns because passageways are insufficient to handle the number of students. Students are learning in modular classrooms and temporary rental spaces. BEEP students have been systematically removed from our school buildings and placed in rented facilities.

This year's PSB Enrollment Projection Report anticipates a decline in growth in the coming years. Even with these conservative projections, five years from now, school enrollment will be more than 1,400 students above what it was in 2005-2006. Ten years from now, projected enrollment remains nearly 1,100 students more than where it was when this growth started. Regardless of enrollment projections, Brookline needs additional capacity today simply to address the current and existing conditions that are subpar and well below what Brookline should expect in its school facilities.

Enrollment Projections: 2016-2018

The 2016 Enrollment Report was the first formal enrollment report generated by the Public Schools of Brookline. This initial report included actual student enrollment from the 1976-1977 school year through September 30, 2016. There were a number of variables that were not included in the 2016 enrollment report, including the effects of in/out migration of older students, grades 1 through 12, and the impact of future development of single family homes into multi-unit condominiums. The report, however, did include estimated enrollment projections including known filed developments over 12 units. The ten year

projection in this initial report was made using a three year birth rate average and a five year progression rate average. Because the students in the out years have not yet been born, the year 6 through 10 projections rely on statistical averages not actual births.

Using this methodology, the 2016 enrollment report showed the following:

Without any development, the projections show a reduction of 175 students (SY26-27) over SY 16-17. However, due to the ten year span there is the potential for a 617 student variance depending on when development is completed and student population rises or shifts. The variance is a function of modeling and the fact that the future projection is based on an average birth rate due to students not yet being born. The average birth rate used is 630 and the Progression Rate is 0.96. As the enrollment projection is completed each year, the district will be able to monitor year-to-year accuracy of the projection.

The above referenced report showed a net increase of 267 K-8 students over 10 years when the estimated projections for known filed developments were included.

It was noted in the 2016 report that the district had at that time already absorbed 1,322 K-8 students within our 8 elementary schools. This increase is equivalent to the current combined enrollment at the Lawrence and Driscoll Schools being added into our existing 8 elementary schools. The stress of this growth has resulted in a school infrastructure that can no longer support Brookline's educational vision or programming.

The 2017 Enrollment Report included a significant and important change from the 2016 Report. In an effort to provide complete clarity and transparency about the School Committee's long standing commitment to the Town's two non-resident student programs, the 2017 Enrollment Report explicitly included the 40 non-resident students who are included in our kindergarten's each year. An error was made, however, in adding these additional students to the birth rate without making a corresponding reduction in the progression rate used to project kindergarten enrollment.

The K-8 projections from the 2017 Enrollment Report have been revised by removing these 40 students and applying the 2017 birth rate and progression rate averages (including known filed housing developments):

FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	FY27	FY28
5,482	5,527	5,573	5,636	5,716	5,657	5,563	5,515	5,540	5,533	5,525

In the original 2017 Enrollment Report, the inclusion of the 40 non-resident students and the calculation error resulted in the following projections (again, inclusive of known filed housing developments):

FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	FY27	FY28
5,482	5,567	5,654	5,737	5,856	5,834	5,775	5,764	5,827	5,857	5,847

Using the same methodology as the 2016 Enrollment Report, there is a net correction of 140 students in FY22 and 322 students in FY28. The FY22 total K-8 enrollment, including this correction, remains 234 students above FY18 actual enrollment.

In the "Brookline Births per Year" section of both the 2016 and 2017 Enrollment Reports, a reduction in birth rates was noted. This reduction in birth rates led to a projected average of 630 students per year in the out years of the 2016 Enrollment Report and a projected average of 615 births per year in the out years of the 2017 Enrollment Report. This trend will continue in the 2018 Enrollment Report, with the projected average of 581 used for the out years. The 2018 Enrollment Report will use a lower 5 year average progression rate, driven lower by the .85 progression rate for the current kindergarten class.

While the progression rate applied to incoming kindergarten students in the 2018 Enrollment Report will be .91, it is important to note that the K-8 average progression rate is 1.0, the 9-12 progression rate is 1.02, to a district wide progression rate of 1.01.

The 2018 K-8 Enrollment Projections, including new housing developments, are as follows:

FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	FY27	FY28	FY29
5,503	5,499	5,474	5,356	5,452	5,310	5,214	5,171	5,097	5,032	4,984

Compared to the revised 2017 K-8 Enrollment Projections (without additional non-resident students) as follows:

FY18	FY19	FY20	FY21	FY22	FY23	FY24	FY25	FY26	FY27	FY28
5,482	5,527	5,573	5,636	5,716	5,657	5,563	5,515	5,540	5,533	5,525

Based on a lower kindergarten progression rate and a lower average birth rate in out years, the FY23 K-8 enrollment projections are 51 students lower than current enrollment. In FY 24, the projections are 193 students lower, inclusive of new developments. FY24 is the last year of the 10 year projections for which students have actually been born. For the purposes of this enrollment projection, the birth rates used to calculate kindergarten enrollment in FY25-29 are the three year average of FY16-18 of 581 students. Even if this decrease in projected enrollment comes to pass, the severe overcrowding in our schools will remain unresolved. A decrease of 193 students in FY24 compared with current enrollment will mean that the overall K-8 enrollment increase from 2005-2024 will still be 1,131 students. Continuing to operate our schools through 2024 in the extreme overcrowded conditions our schools currently face will prevent the Public Schools of Brookline from achieving our educational vision for all students.

The new housing included in the 2018 Enrollment Projections comes directly from the Planning Department. Not included in these projections are any age restricted developments. For planning purposes, the 2018 Enrollment Projections use the more conservative Waldo/Durgin proposal as opposed to *The Coolidge*. Based on the information provided by the Planning Department to our demographer, the 2018 Enrollment Projects include an estimated increase of 89 students K-12 in the Coolidge Corner district, 50 students K-12 in the Lawrence district, and 203 students K-12 in the Baker district.

The enrollment projections are based on the October 1 certified enrollment number. The enrollment of the Public Schools of Brookline, however, changes throughout the year. At this point in the year, our kindergarten enrollment has reached 617 with our overall K-8 enrollment now 26 students higher than the October 1 certified count.

The same caution included in the 2016 Enrollment Report applies to the 2018 Enrollment Projections. Since 2000, Brookline's residential unit count grew by 400 units. Our birth rate predictive model does not account for the in/out movement in our district, it does not include the future impact of single unit family conversions to condominiums, and it does not include the impact of generational changes. Future enrollment reports will include the above variables, making for stronger planning and modeling for student growth or reduction.

RE: Overcrowding in K-8 Schools

Between 2005 and 2018 the Town of Brookline has added 1,599 K-8 students into our eight elementary schools. Based on the way our schools operated just over a decade ago, the Town has added the equivalent of four full K-8 schools into our existing K-8 infrastructure. The absorption of this growth into our eight K-8 schools means our schools have seen anywhere from 18% to 68% growth over the past twelve years. This growth is captured in the chart below:

	2005-2006	2018-2019	# Growth since 2005	% Growth since 2005
Baker	647	762	115	18%
Coolidge Corner	670	873	203	30%
Driscoll	366	614	248	68%
Heath	360	522	162	45%
Lawrence	478	705	227	47%
Lincoln	410	581	171	42%
Pierce	546	865	319	58%
Runkle	427	581	154	36%
	3,904	5,503	1,599	41%

By adding the equivalent of four K-8 schools into existing buildings and rented facilities, our system has experienced a serious degradation of instructional infrastructure. Cramming so many additional students into our buildings has resulted in dramatically overburdened teaching and learning spaces, as well as cafeterias, gyms, and administrative offices. Spaces needed for contemporary education, such as dedicated rooms for special education, English language instruction, project based learning, and teacher collaboration, are lacking in all of our schools (with the exception of Coolidge Corner). These spaces are taken for granted in Brookline's peer communities, and are needed here for our students to keep pace.

The students most impacted by overcrowding are those who need the most support. Students who are English language learners, students with disabilities, low income students, and students classified as high needs* make up significant portions of each of our elementary schools. Yet, these are the very students whose instructional supports are now in our most compromised spaces. These substandard spaces

**The high needs student group is an unduplicated count of all students belonging to at least one of the following individual subgroups: Students with Disabilities, English Learners, Former English Learners, or low income students (eligible for free/reduced price lunch).*

include converted closets, converted bathrooms, tables in hallways, classrooms where two to five educators share the same space, and windowless rooms. Our BEEP program has systematically been moved out of our elementary school buildings, unraveling our once-coherent PK-8 structure.

Our early projection work this fall shows that the unprecedented growth of the past 12 years may level off over the next few years. Our initial 2023 K-8 projection shows 51 fewer total students than were enrolled on October 1st of this year. This gives the Town the opportunity to solve our existing problems through the three site solution approved by the Select Board, School Committee and Advisory in June 2018.

Often lost in the discussion of the Baldwin School and both the Driscoll and Pierce expansion/renovation projects is the current state of our elementary schools. To provide the Town with a better understanding of the school-by-school impacts of this compromised space, members of the Select Board, School Committee, and Advisory Committee toured Baker, Driscoll, Heath, Lawrence, Lincoln, Pierce and Runkle Schools. During these tours, each principal was interviewed about how the overcrowding negatively impacts our ability to educate students.

Prior to each narrative you will find capacity information for each school, as reported in the March 29, 2012 MGT Enrollment Capacity and Utilization Report. You will also find the selected student populations information, as reported in the 2017-2018 DESE School Profile. Following this information, you will find the Principal's Narrative.

The MGT capacity numbers listed below must be considered along with the significant increase in both our English Learning students, RISE and other programs for students with disabilities. These varied programs require significant amounts of space to appropriately serve student needs, putting additional stress on our already overcrowded schools. Even with our newest enrollment projection numbers, the need for the Town's three site solution is clear. This is the path that provides the town-wide capacity needed to relieve overcrowding and eliminate the use of substandard spaces across all of our schools.

Public Schools of Brookline 2005-2018 Enrollment v. Capacity						
	2005 Enrollment	2008 Enrollment	2012 Enrollment	2018 Enrollment	Capacity*	Number of Students Over + or (Under) Capacity
Baker	647	672	678	762	679	+83
Coolidge Corner	670	689	764	873	945**	(72)
Driscoll	366	403	530	614	574	+40
Heath	360	402	494	522	553	(31)
Lawrence	478	557	623	705	572***	+133
Lincoln	410	469	545	581	437	+144
Pierce	546	630	699	865	634	+231
Runkle	427	468	494	581	616	(35)

Enrollment figures for Coolidge Corner, Driscoll, Heath and Runkle Schools do not include BEEP students.

**Capacity information based on March 29, 2012 MGT Enrollment Capacity and Utilization Report*

***CCS capacity is 945, effective 9/1/18 based on new construction*

****Four additional classrooms were added at Lawrence in 2015, but there was no addition of common core spaces or small instructional spaces*

Capacity Information based March 29, 2012 MGT Enrollment Capacity and Utilization Report

Capacity: 679
2005 Enrollment: 647
2008 Enrollment: 672
2012 Enrollment: 678
Current Enrollment: 762
Number of students over capacity: 83

Selected Student Populations, 2017-2018 (Source: DESE School Profile)

Title	% of School	% of District	% of State
First Language not English	36.0	30.7	20.9
English Language Learner	13.4	10.8	10.2
Students With Disabilities	14.4	15.5	17.7
High Needs	35.7	33.4	46.6
Economically Disadvantaged	7.3	10.8	32.0

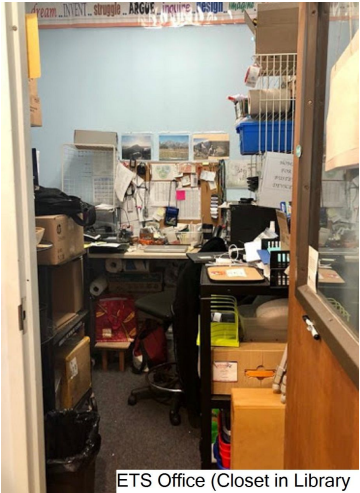

Number of classes with more than 21 students: 12

Principal's Narrative

- Guidance counselors, educational leaders, principal and vice principals struggle to meet the needs of students due to lack of space to adequately service student needs.
 - The co-principals and vice-principal share one office, which interferes with their ability to run the school. Only one confidential meeting at a time can take place, often requiring students, educators and families to wait.
 - There is not the physical space needed to meet with students. Additional student support staffing will not allow the school to address unmet student needs because no spaces are available for additional staff to work.
 - Guidance counselors share an office, preventing counselors from having on-demand, confidential conversations with students. The need for student services has increased over the past decade, yet space has been taken from guidance to make room for new classrooms.
 - At various points in the year, individual students may require a private, quiet space to calm down. These spaces no longer exist, so students are required to calm down in open spaces and/or in hallways, posing significant privacy concerns for students. A closet has been converted to a calming space, but it is open to the hallway and anyone who may walk by.

- Teachers across the school are utilizing hallways as learning spaces, often for small group instruction meant to support our most struggling students. This includes literacy intervention/support, math intervention/support, small group EL instruction, and special education services.
- The auditorium is used as a music classroom, so the school cannot program school events or outside programming without displacing elementary music.
- English Language instruction for different languages and students receiving services across multiple proficiency levels are held in the same space, at the same time. At times, math and ELE services take place in the same space.
- In the literacy intervention class, there are at times three different intervention groups held simultaneously, requiring some students to wear noise cancelling headphones in order to access intervention services.
- Rather than a maker space, there is a maker “cart”. Without a dedicated space, long term collaborative, project based learning projects are not feasible.
- The educational technology specialist who serves all Baker educators and 762 students works in a small closet instead of an office or classroom. From this space, the ETS provides both technical support and instructional coaching required for the integration of technology into the curriculum.
- The gymnasium is almost half the size recommended by the Massachusetts School Building Authority (MSBA) for the number of students at the school. In order to meet Brookline’s expectation of twice weekly physical education classes for all students, classes are regularly combined in the gym.
- The medical suite is undersized and does not meet the MSBA guidelines. It is approximately half the size that it should be and lacks separate spaces for different functions, such as an examination room, student resting area, outer waiting room and separate nurse’s office space. Currently, all of these functions take place in one 374 sq. ft. room with no dedicated toilet.
- Cafeteria is substandard in size requiring four lunches, with the first lunch starting at 10:55 a.m. and the last lunch time ending at 1:10 p.m. (on Fridays, school ends just 30 minutes later).
- Baker School has undergone numerous interior modifications to create additional enrollment driven instructional space including:
 - Adding walls to subdivide classrooms into two rooms
 - Using the small area outside of the elevator door as a learning space
 - One hallway has been walled off and converted into two classrooms
 - A science classroom has been carved out of a basic classroom - no eye wash and the small classroom layout is suboptimal so many of the students cannot see the board adequately
 - Adding folding walls to subdivide rooms into smaller rooms
 - Removing fixtures and lockers from the boys’ locker room to create a music room
 - Dividing the art room into two smaller art rooms to provide two teaching spaces
 - Modifying closets into a special education small group instructional area
 - Gutting closet space to create office space
 - Creating new door into gymnasium so existing storage space could be used as a Physical Education office space.
 - Adding two modular classrooms

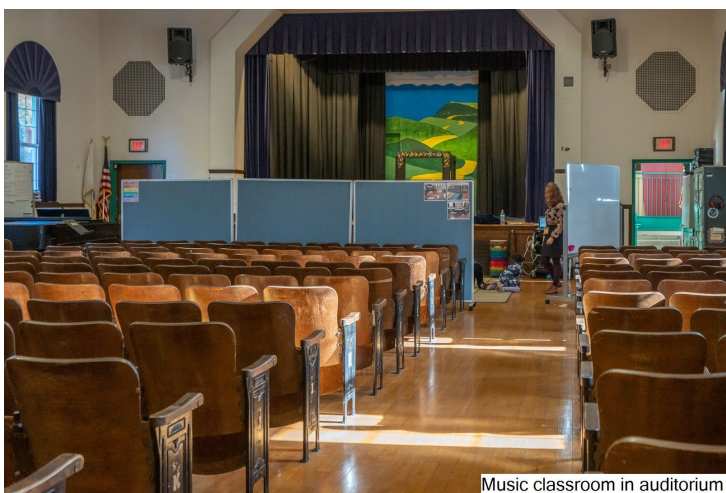

Substandard Spaces at Baker

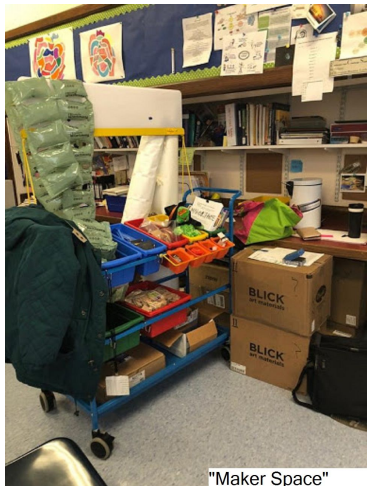

ETS Office (Closet in Library)

Shared office for two Principals and VP

Music classroom in auditorium

"Maker Space"

Literacy Room for Numerous Educators

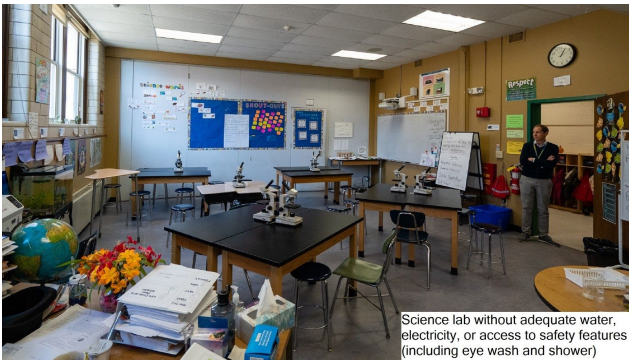

Closet used as calming space

Small group breakout - learning space outside elevator

Math Specialist in Shared Space

Science lab without adequate water, electricity, or access to safety features (including eye wash and shower)

Driscoll

Capacity Information based March 29, 2012 MGT Enrollment Capacity and Utilization Report

Capacity: 574

2005 Enrollment: 366

2008 Enrollment: 403

2012 Enrollment: 530

Current Enrollment: 614*

Number of students over capacity: 40

*Not inclusive of 1 BEEP Class

Selected Student Populations, 2017-2018 (Source: DESE School Profile)

Title	% of School	% of District	% of State
First Language not English	26.9	30.7	20.9
English Language Learner	9.4	10.8	10.2
Students With Disabilities	13.7	15.5	17.7
High Needs	28.6	33.4	46.6
Economically Disadvantaged	7.5	10.8	32.0

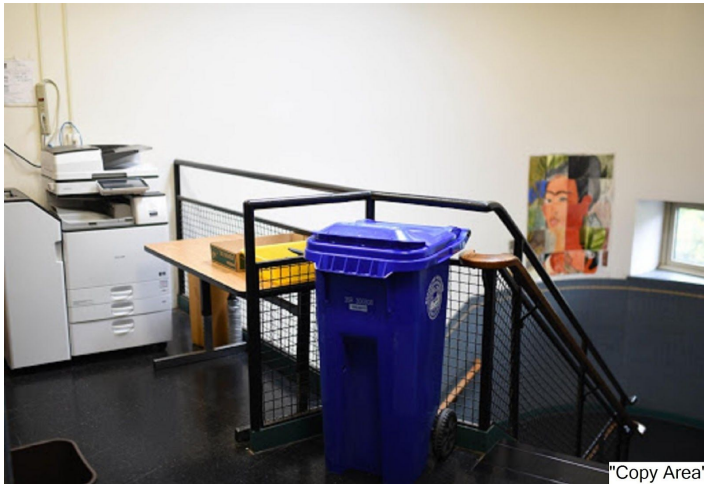

of classes with more than 21 students: 17

Principal's Narrative

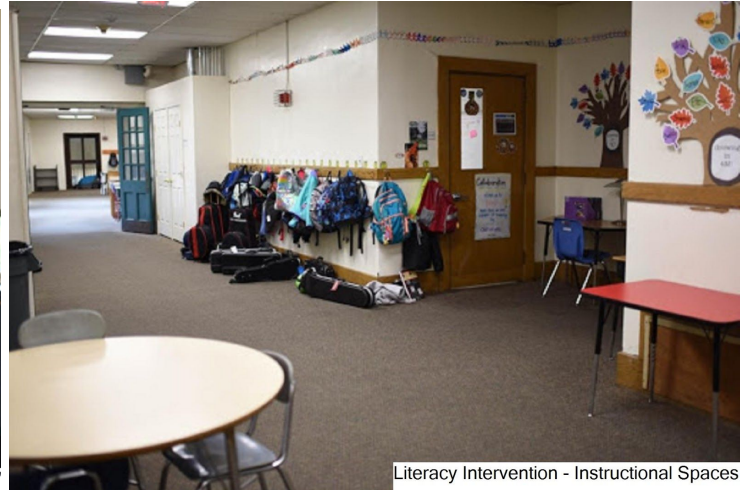

- One bathroom has been converted into an office; book rooms have been converted into makeshift offices.
- Educational instruction is taking place in closets. One of the closets is shared by three educators.
- Multiple classrooms, in particular middle school classrooms, are undersized for the number of students and cannot support collaborative, project based learning.
- Middle school science classrooms lack proper safety equipment. Classrooms are so undersized they limit the types of science experiments that can be taught as part of the science curriculum.
- No meeting spaces are available for teacher collaboration, or for sensitive conversations with parents, students, or colleagues.
- The medical bed that is required for a student does not fit in the nurse's office so it is located in a hallway. The medical suite is undersized and lacks separate spaces for different functions, such as examination room, student resting area, outer waiting room and separate nurse's office space. The current medical area consists of one 244 sq. ft. room. This area doesn't meet the Massachusetts School Building Authority guidelines of 610 sq. ft.
- Spaces in the basement (ground floor level) not intended to be classrooms have been converted into instructional spaces, including a space that was formerly a locker room. These conversions have resulted in classrooms that lack proper windows and natural daylight.

- Spaces that were once the showers and locker room are now the multipurpose room.
- Undersized cafeteria requires five lunches, with the first lunch beginning at 10:15 a.m. and the 5th lunch ending at 12:50 p.m.
- Spaces that once held two classrooms have now been reconfigured and new walls built to create three separate classrooms.
- Reading intervention for struggling readers takes place in the hallway.
- ELE services are in shared classrooms and often have three teaching groups going on at the same time.
- Small group instruction for students, including struggling students, EL students, and students with disabilities, often takes place at tables in the hallways.
- Stairwell is used for the copy room.

Substandard Spaces at Driscoll

"Copy Area"

Literacy Intervention - Instructional Spaces

Small group breakout space in hallways

Students with disabilities classroom, multiple students taught simultaneously

Closet space used as METCO office

Necessary medical equipment in hallway because nurse's office not large enough

Title	% of School	% of District	% of State
First Language not English	19.5	30.7	20.9
English Language Learner	4.6	10.8	10.2
Students With Disabilities	10.1	15.5	17.7
High Needs	21.1	33.4	46.6
Economically Disadvantaged	7.4	10.8	32.0

Number of classes with more than 21 students: 6

Principal's Narrative

- Locker rooms have been converted into classrooms, but are so small that there is barely enough space for student desks. When the class is full, some students sit on the floor. In order to access these classrooms, students must go up a flight of stairs with no ADA accessibility.
- All but two closets have been converted into offices and instructional spaces, for guidance, literacy specialists, math specialists, and special education instruction. There are only two storage closets remaining.
- One former storage space located on the ground floor is used by the EL teacher, a guidance counselor, an occupational therapist, and a literacy specialist. This room has no windows. Private and often sensitive meetings with the school counselor take place in a space behind a makeshift curtain with no separate door for privacy.
- What was formerly a bathroom off of the converted locker rooms has been converted into an office for the METCO liaison.
- The teachers' lounge is a windowless room that has been carved up and subdivided to allow for other uses, including guidance, ECS and math specialists.
- The cafeteria is not adequately sized for the number of tables needed for three lunches. Extra chairs are pulled up to tables each day to allow students to eat in the cafeteria.

- The lack of collaborative work space in the school means the library is often used by educators for meetings and as a work space.
- The lack of space poses a safety issue. Hallways are often used for storage, which limits walkway space. There is also not appropriate space to secure and store equipment, such as the school's kiln which is located in a corner of the art room.
- Special education instruction takes place in converted closets, with some rooms having no windows. Multiple groups from different grades working on distinct goals are often required to meet in the same space.

Students With Disabilities	12.9	15.5	17.7
High Needs	41.1	33.4	46.6
Economically Disadvantaged	11.2	10.8	32.0

Number of classes with more than 21 students: 9

Principal's Narrative

Next year, there will not be sufficient physical space to accommodate the entire middle school program

- The school has no space to accommodate the additional 8th grade section next year. Without this space, it is likely that class size will need to increase.
- The same class is not always held in the same classroom. For example, on Tuesday, the students might have English in one room, and on Thursday, English is held in a different room. Health class also moves around to different classrooms throughout the week. This kind of shuffling prevents educators from planning long-term collaborative hands-on projects .

Challenging spaces for special education

- Small group instruction is taking place in inadequate spaces.
- Literacy room: five educators use the same room and three of them hold small groups, often at the same time. At the same time, the two other educators who support planning curriculum and professional development for the entire school are trying to use the same space to work.
- Learning center: one classroom is used for two separate classes.

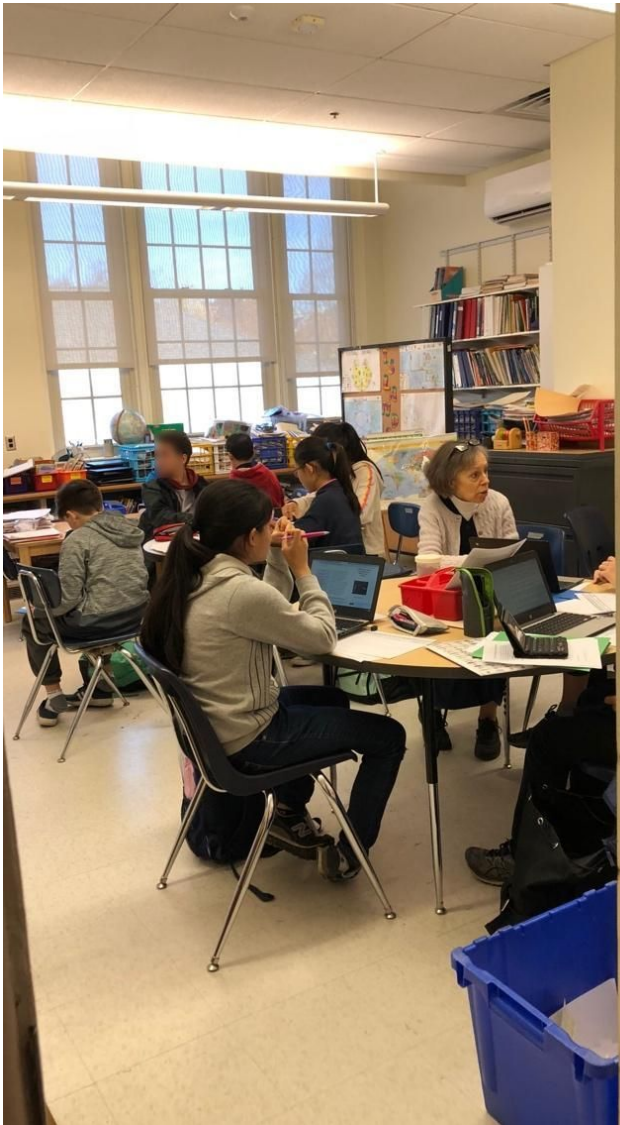

Inadequate space for the ELE program

- Two teachers are using the same undersized space. 70 students who receive ELE services at Lawrence receive services in the same single classroom.

Library is no longer available for the students

- The library is the only common space available at the school, so it is now used for many functions, often interfering with the students' ability to use the library.
- There is no media/computer room so the library is used for middle school classes.
- As part of "expand-in-place", a classroom was built in the library two years ago, further reducing space and availability.
- Since there is no other room available, the library is used for school council meetings, teacher meetings with parents, and for Diversity, Inclusion, Community & Equity "DICE" meetings.
- Teachers sign up to bring their students to the library during the week, but these times are often canceled because the library is being used for other "spaces."

High Needs	42.0	33.4	46.6
Economically Disadvantaged	14.7	10.8	32.0

Principal's Narrative

Hallway areas meant for collaborative work have been converted into classrooms by adding walls that block natural light

- Many intervention services are provided in hallways: struggling students must work in the hallways while other students walk by, providing constant distractions.
- All special education spaces at Lincoln are undersized and impact the ability of educators to meet individual student goals.

Situation in the library

- In the library, two math specialists work in a storage area.
- Math instruction and library classes occur at the same time, with no sound buffer.
- A closet in the library is the teaching space for a Literacy Specialist.
- The METCO Coordinator has a desk in the library (behind the circulation desk), but must wait until the Literacy Specialist vacates the closet to have privacy for calls or meetings.

The cafeteria is inadequate

- Lunch starts at 10:30am
- The middle school lunch uses every seat in the cafeteria with no space for additional seats or tables.

Other space issues

- The basement computer lab is used as a social studies classroom. Extended Day also shares that room, and staff begins preparation for the extended day program during a seventh-grade social

studies class. This same space is also used by the technology specialist, and the inclusion facilitator.

- Lincoln is proud to have an Adaptive Learning Center for children with severe learning, physical and cognitive disabilities, but it is in small, inadequate rooms not designed as classrooms. There are no bathrooms in the ALC classroom spaces so public bathrooms are closed down for periods of time for these students.
- There is inadequate occupational therapy and physical therapy spaces, impacting the ability to meet students' needs.
- There is no sensory gym or large occupational therapy space for students in the Adaptive Learning Center.
- There are not enough bathrooms for staff or for the number of students in the building.
- The gym is undersized, and some classes have to be doubled up.
- The ELE program has been growing and the space available for these classrooms has been shrinking. Currently, two teachers teach in one classroom at the same time.
- Space is not available for conservatory and now percussion meets in the cafeteria; clarinets in the basement; 4th grade flute meets in a classroom while a 3rd grade general education class is working right next door trying to learn.
- There are no longer enough classrooms or even carve-out spaces for the specialists, so classrooms have literally been created in the hallway.

2008 Enrollment: 630

2012 Enrollment: 699

Current Enrollment: 865

Number of students over capacity: **231**

Selected Student Populations, 2017-2018 (Source: DESE School Profile)

Title	% of School	% of District	% of State
First Language not English	32.0	30.7	20.9
English Language Learner	17.2	10.8	10.2
Students With Disabilities	10.7	15.5	17.7
High Needs	34.5	33.4	46.6
Economically Disadvantaged	11.3	10.8	32.0

Principal's Narrative:

Active classroom is used as a hallway

- The only indoor connector between the main building and the historic building is through a tunnel/pathway that goes directly through a classroom.
- When students in classrooms in the historic building go to lunch, recess, or to any specialist such as music, physical education or art, they travel through this classroom. In nice weather, the students go outside around the building, but sometimes, this cut-through cannot be avoided.

Common spaces are overtaxed

- The gymnasium is too small so two classes use the space at one time.
- At lunch and recess, there are so many students in these spaces that some children feel very overwhelmed, making lunch and recess stressful times instead of a needed break for them.

Transitions take too much time

- Students spend approximately 30 minutes every day transitioning, which is time off learning.
- Conservatory (music instruction) takes place at the Brookline Teen Center down the street, which involves students leaving the school and walking across the street and down the block, resulting in less instructional time.
- Time blocks have to be scheduled based on what is available, not what is best for the students. Because the 8th graders have health at the teen center, all of their core content is

after lunch, which is not an ideal schedule for them. The principal has to make trade-offs like this because there is no flexibility in the day.

Next year there will not be sufficient space to accommodate the entire middle school

- There will be one additional 6th grade section next year and the same number of 7th and 8th grade sections. Even if another teacher is hired, there is no space for that classroom and there is not the space available to accommodate the scheduling blocks that go along with a middle school schedule.

Other examples of inadequate spaces:

- Literacy and math interventions take place in the hallway.
- ELE spaces have been doubled up and two teachers use one classroom at the same time.
- There is no space for services to take place. For example, the principal's office is used for occupational therapy services.
- Lunches start at 10:45 a.m. and go until 12:55 p.m.
- There are not enough collaborative learning spaces; teachers have to sit on the floor for the faculty meeting.
- Lockers have been inserted into the library.
- One entire wing of the school is not ADA accessible to students with disabilities.
- The nurse wing is not ADA accessible to students with disabilities.
- The nurse's office is not adequate in size and, at times during the day there is a line out of the door.

English Language Learner	9.1	10.8	10.2
Students With Disabilities	20.3	15.5	17.7
High Needs	31.7	33.4	46.6
Economically Disadvantaged	6.9	10.8	32.0

Principal's Narrative

How is Runkle overcrowded?

- Runkle was renovated and expanded to fit 600 students. We currently have 581 students. However, the school is overcrowded because there is inadequate space for the special educators and specialists required to support Brookline's *Reaching for Independence through Structured Education* (RISE) program.
- Runkle is home to RISE, one of the fastest growing district-wide programs, which educates students on the PDD/autism spectrum. Currently, there are 51 students in the RISE program and Runkle does not have adequate space for this growing program in addition to a full three sections per grade level.

Space restrictions are impacting the school's ability to meet the social and emotional needs of the students

- An additional part-time psychologist was needed to meet the needs of the Runkle student population. This psychologist was hired, however, there is not the space available in which this professional can work. Now both of the psychologists not only share the same office, they share the same desk. They cannot meet with students or parents at the same time because of the nature of their work; the space restrictions negatively impact their ability to serve the needs of the students.

- The psychologists now have to spend precious time - time they should be spending on the students - trying to find empty classrooms or private corners for these sensitive meetings to take place.

Special Education instruction is taking place in compromised spaces

- 2 RISE classes share one classroom. In a typical RISE classroom, there are seven students, one teacher, and six paraprofessionals. Currently, two RISE classes share one classroom. This means that at sometimes during the day, 14 students, two teachers, and 12 paraprofessionals are in the same classroom at one time.
- The sensory room is longer used exclusively as a sensory room. It is now used as the sensory room, office for adaptive physical education teacher, and “cool down” room for children who need a separate space.
- Since there is not a separate cool down room, hallways are used as break places when the sensory room is not available. This means children with significant challenges who are struggling with their emotions and self-control have to do so in public. Additionally, because of the size of the school and the number of children in the RISE program, there should be more than one cool down room throughout the school.
- Resources that are needed, and even available, cannot be utilized adequately because space is not available:
 - Example: **Sensory overload swing**- rather than having this setup all of the time, there is a hook in the middle of one classroom. When students would like to use this space, several educators need to set it up for the student to use it and it has to be taken down when they are finished. Other teachers would like to utilize it, and the sensory room would be a more appropriate place for it and make it more accessible, but there is not the space available.
 - Example: **Trampoline**- a trampoline is a valuable tool for students with special needs. The special education teachers requested a trampoline to use with the children and the funding was obtained, but they could not set it up because there is no space for it.

Other space challenges:

- Runkle has four lunches starting at 10:30 a.m.
- The educational vision for the district includes a maker space and break out spaces for collaborative learning. There is not space for these at Runkle. They only have a maker “cart”.
- There are no breakout spaces for collaborative learning.
- Instruction for both general education students and special education students is taking place in former storage closets and hallways.
