

Problem of the Week #18: How much clay?

Mr. Rae makes clay pots in his art studio. He recently ordered 1 ton of clay to make pots (*it's true!*). The ton of clay arrived in 40 boxes. On average, Mr. Rae can make 10 clay pots with the clay in 1 box.

#1 - How many pounds of clay does he use for 1 pot?

#2 - How many pots can he make with 1 ton of clay?
