

Problem of the Week #11: Soccer Sneaks

Betsy, Liz, Mark, Shari, and Wyman were in the league tournament on a rainy day. They left their dry sneakers on the sidelines to put on after the game. Since the sneakers were all the same color and had the same brand logo, telling them apart was a bit tricky. The shoe size was the only difference. There was one pair from each of the sizes: 4, 6, 7, 8, and 9.

Use the clues below to decide who owns which sneakers.

- Betsy knew hers were the smallest.
- Liz said hers were larger than Shari's but smaller than Mark's.
- Wyman said his were the largest.
