# Problem of the Week #15: Tangram Money?

A tangram is a set of 7 puzzle pieces that can be used to make different shapes.

A Tangram company is making pieces out of new plastic, and they need to figure out the cost. If a small triangle costs 25 cents to make, how much will it cost to make a whole tangram puzzle? (**Hint:** Borrow a tangram set from the Math Center or print and cut a model tangram puzzle at: http://etc.usf.edu/clipart/74400/74405/74405_tangram_w.htm)
