

## Problem of the Week # 8

### PB & J

A student surveyed 50 fifth-grade students.

41 students said they liked peanut butter on their sandwiches,  
35 students said they liked jelly on their sandwiches, and  
30 students said they liked both peanut butter and jelly on  
their sandwiches.

How many students (out of 50) liked **neither** peanut butter or jelly?

*(Hint: some people were counted twice)*
