

## Background

- Students at Brookline High School from all backgrounds should be exposed to computing before they graduate. After introductory computing courses, robotics courses provide a pathway to further studies.
- Autonomy in robotics (being self-directed) implies computing. All robotics courses should stress *autonomous* robotics, because that is the future of robotics — for example, self-driving cars. Therefore, robotics courses are also computing courses.
- A robot is anything with sensors and actuators. Robotics (and computing) courses should encompass all types of robots: driving robots, assistive robots, prosthetic robots, wearable robots, sculptural robots, walking robots, grasping robots, flying robots, *etc.*
- Robotics (and computing) courses should include a consideration of ethics and the choices posed in the design, implementation, and deployment of robots and the software controlling them.
- Robotics (and computing) courses should incorporate creativity, one of the *7 Big Ideas of Computer Science* (<http://j.mp/7-big-ideas>). Making computational artifacts, including robots and software, is inherently a creative endeavor.
- The study of robotics is inherently project-based and the projects can be student-directed, once students master basic skills in computing and mechanics. In this approach, task-oriented projects can include autonomous driving (wayfinding, maze solving, mapping, tailing), prosthetic devices, wearables, kinetic sculptures, legged robots, aerial robots, and Botball.
- [Botball®](#) is an autonomous robotics program with both regional and global competitions. Competitions are good for two reasons: they establish deadlines and they provide a task to accomplish every year that incorporates important aspects of autonomous robotics (odometry & route planning, vision, mechanical design, contingency and error recovery, strategy, ...)

## Course syllabus

*Students will be able to independently use their learning to...*

use sensors	<ul style="list-style-type: none"> <li>● touch sensors</li> <li>● distance sensors</li> <li>● reflectance sensors</li> <li>● cameras</li> </ul>	design robots	<ul style="list-style-type: none"> <li>● design rolling, walking, assistive, wearable, sculptural, flying robots</li> </ul>
use actuators	<ul style="list-style-type: none"> <li>● LEDs</li> <li>● drive motors</li> <li>● servo motors</li> </ul>	create artifacts	<ul style="list-style-type: none"> <li>● create conceptual artifacts (specifications, designs, evaluations)</li> <li>● create computational artifacts (code)</li> <li>● create physical artifacts (robots)</li> </ul>
write code	<ul style="list-style-type: none"> <li>● use block-based languages (Snap!, MIT App Inventor)</li> <li>● use text-based languages (Python, Robot-C, Forth)</li> <li>● error recovery</li> </ul>	complete tasks	<ul style="list-style-type: none"> <li>● basic mobility</li> <li>● line following and maze solving</li> <li>● object retrieval and sorting</li> <li>● grasping and manipulating</li> <li>● real-world interaction</li> </ul>
consider ethics	<ul style="list-style-type: none"> <li>● articulate technological impact</li> <li>● make ethical design choices</li> <li>● cite sources for remixed work</li> </ul>	apply strategy	<ul style="list-style-type: none"> <li>● plan task completion</li> <li>● use feedback to adjust strategy</li> <li>● respond to real-world failures</li> </ul>
communicate	<ul style="list-style-type: none"> <li>● reflect on work of self and others</li> <li>● review work of self and others</li> </ul>	explore advances	<ul style="list-style-type: none"> <li>● use artificial intelligence</li> <li>● use multi-robot swarms</li> </ul>

Optional: compete in Botball	<a href="https://www.kipr.org/botball/what-is-botball/aligned-standards-national-impact">https://www.kipr.org/botball/what-is-botball/aligned-standards-national-impact</a> — critical thinking, analytical skills, adaptive learning / flexibility, decision making, computational thinking, creativity / innovation, collaboration, problem solving, communication.
------------------------------------	---

*Student practices will include...*

- From [PBL](#):
- solve challenging & authentic problems
  - sustain inquiry in their problem-solving
  - direct their own problem-solving process
  - iteratively critique & revise their design & implementation (imagine - design - build - test)
  - create artifacts for their authentic audience
  - reflect on their designs & artifacts and on the process
- From [DLCS](#):
- creating
  - connecting
  - abstracting
  - analyzing
  - communicating
  - collaborating
  - researching

*Student subject matter knowledge will include...*

- Computing and Society**
- Understand safety and security concepts, security and recovery strategies, and how to deal with cyberbullying and peer pressure in a social computing setting. (9-12.CAS.a – Safety and Security)
  - Understand, analyze impact and intent of, and apply technology laws, license agreements and permissions. (9-12.CAS.b – Ethics and Laws)
  - Recognize, analyze, and evaluate the impact of technology, assistive technology, technology proficiencies, and cybercrime in people's lives, commerce, and society. (9-12.CAS.c – Interpersonal and Societal Impact)
- Digital Tools and Collaboration**
- Selection and use of digital tools or resources and computing devices to create an artifact, solve a problem, communicate, publish online or accomplish a real-world task. (9-12.DTC.a – Digital Tools, 9-12.DTC.b – Collaboration and Communication, 9-12.CS.a – Computing Devices)
  - Use of advance research skills including advanced searches, digital source evaluation, synthesis of information and appropriate digital citation. (9-12.DTC.c – Research)
  - Understand how computing device components work. Use of troubleshooting strategies to solve routine hardware and software problems. (9-12.CS.a – Computing Devices, 9-12.CS.b – Human and Computer Partnerships)
  - Understand how networks communicate, their vulnerabilities and issues that may impact their functionality. Evaluate the benefits of using a service with respect to function and quality. (9-12.CS.c – Networks, 9-12.CS.d – Services)
- Computational Thinking**
- Creation of new representations, through generalization and decomposition. Write and debug algorithms in a structured language. (9-12.CT.a – Abstraction, 9-12.CT.b – Algorithms)
  - Understand how different data representation affects storage and quality. Create, modify, and manipulate data structures, data sets, and data visualizations. (9-12.CT.c – Data)
  - Decompose tasks/problems into sub-problems to plan solutions. (9-12.CT.d – Programming and Development)

## 2019-2020 — Autonomous Robotics — Proposed Syllabus

- Creation of programs using an iterative design process to create an artifact or solve a problem. (9-12.CT.d – Programming and Development)
- Creation of models and simulations to formulate, test, analyze, and refine a hypothesis. (9-12.CT.e – Modeling and Simulation)

This subject matter knowledge is from the *2016 Massachusetts Digital Literacy and Computer Science (DLCS) Curriculum Framework*. Additional subject matter knowledge will include strands and topics from the *2016 Massachusetts Science and [Technology / Engineering](#) Curriculum Framework* (including HS-ETS-1 – engineering design, HS-ETS-2 – materials, tools, and manufacturing, and HS-ETS-3 – technological systems).
