Re: Phase I Environmental Site Assessment
400 Heath Street
Brookline, Massachusetts

Dear Larry:

Sanborn, Head & Associates, Inc. (Sanborn Head) has prepared this Phase I Environmental Site Assessment for the above-referenced property in Brookline, Massachusetts.

Thank you for the opportunity to work with you on this project. Please call us at 857.327.9730 with any questions you may have.

Very truly yours,
SANBORN, HEAD & ASSOCIATES, INC.

Stan S. Sadkowski, P.E.

EXECUTIVE SUMMARY

On behalf of Beals Associates, Inc. (Client), Sanborn, Head & Associates, Inc. (Sanborn Head) has prepared this Phase I Environmental Site Assessment (ESA) for the property located at 400 Heath Street in Brookline, Massachusetts (Site). The Site consists of approximately 5.4 acres of land which is occupied by a portion of Pine Manor College, including the school's recreational baseball field. The Site location is shown on the Locus Plan provided as Figure 1.

This Phase I ESA report was performed in substantial conformance with the scope and limitations of the *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E 1527-13) and the U.S. Environmental Protection Agency's (USEPA) "All Appropriate Inquiry" Final Rule, 40 C.F.R. Part 312 (AAI). Sanborn Head's services and this report are subject to the limitations provided in Appendix A.

Based on the services summarized herein, this Phase I ESA has revealed the following Recognized Environmental Condition (REC) in connection with the Site:

- Available records that were reviewed by Sanborn Head indicate several underground storage tanks (USTs) were located on the subject Site. As described in the Underground Storage Tank Closure Report prepared by the Vertex Companies, Inc. (Vertex) dated December 27, 2016, eight historical USTs lacking closure documentation were identified at the Site address in 2008. In addition, according to Brookline Fire Department records, also indicate that some of the USTs may have been removed without closure documentation. We note, however, that the Site address refers to the Pine Manor College campus, of which the subject Site comprises a smaller portion. The subject Site is located on the northern portion of Pine Manor College and includes the school's recreational baseball field. However, due to the lack of supporting documentation it is not clear if the USTs are located on the subject Site on the other portions of the campus. As such, since additional documentation pertaining to the specific location and closure of the tanks was unavailable, and Sanborn Head was not able to contact the Site owner or perform a Site reconnaissance on the property as part of this ESA, the lack of closure documentation pertaining to the USTs, the uncertainty of the locations of the USTs, and the potential presence of contamination associated with these former USTs is considered a REC.

ASTM E 1527-13 requires that data gaps in the research performed be identified. Due to the nature of the transaction of this property, the Client requested that Sanborn Head not contact the Site owner or perform a Site reconnaissance on the property. Sanborn Head's Site reconnaissance observations were made from the perimeter of the Site from the public roads. The lack of a Site owner interview and on-Site reconnaissance is considered data gap.

1.0 INTRODUCTION

This report documents the results of a Phase I Environmental Site Assessment (ESA) performed by Sanborn, Head & Associates, Inc. on behalf of Beals Associates, Inc. for the property located at 400 Heath Street in Brookline, Massachusetts (Site) and shown on the Locus Plan provided as Figure 1. The objective of this ESA was to identify "Recognized Environmental Conditions" (RECs) associated with the Site. As defined by ASTM E1527-13[1] a REC is the presence or likely presence of hazardous substances or petroleum products in, on, or at a Site: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The Site, shown on Figure 2, consists of approximately 5.4 acres of land which is occupied by a portion of Pine Manor College, including the school's recreational baseball field. The Site has been developed since at least 1938 and has remained relatively unchanged, with the exception of the construction of the baseball field between 1986 and 1995.

1.1 Scope of Services

This Phase I ESA report was performed in substantial conformance with the scope and limitations of ASTM E 1527-13 and the U.S. Environmental Protection Agency's (USEPA) "All Appropriate Inquiry" Final Rule, 40 C.F.R. Part 312 (AAI). The term "Phase I" as used in this report is defined in ASTM E 1527-13 and should not be considered equivalent to the use of the same term in various state regulatory programs. The Scope of Services to complete this Phase I ESA was outlined in Sanborn Head's Proposal for Services dated November 16, 2017, and authorized to proceed on November 10, 2017. The scope of services consisted of four main components:

- A review of physical setting, historical use records, and reasonably ascertainable records relative to environmental conditions at the Site;
- A Site reconnaissance visit of readily-accessible exterior portions of the Site visible from the perimeter of the parcel and the adjacent roads;
- Interviews with select local government representatives regarding environmental conditions at the Site; and
- Preparation of this report to document Sanborn Head's findings, opinions, and conclusions regarding potential RECs in connection with the Site.

Sanborn Head's services did not include non-scope considerations listed in ASTM 1527-13, such as the presence of asbestos-containing building materials, lead based paint, polychlorinated biphenyls (PCBs) in building materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to releases of hazardous substances or petroleum products into the

[1] ASTM International. "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process"

environment, industrial hygiene, lead in drinking water, mold, radon, regulatory compliance, or wetlands.

1.2 Limitations, Deviations, and Limiting Conditions

As stated in ASTM E 1527-13, Section 4.5.1, uncertainty regarding the potential for RECs at the Site cannot be wholly eliminated through completion of Phase I ESA services. Conducting this Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the Site, recognizing reasonable limits of time and cost. It is assumed that this Phase I ESA may not identify latent environmental conditions potentially related to or arising out of undocumented past uses of the Site or neighboring properties. Sanborn Head's services and this report are subject to the limitations provided in Appendix A.

In our opinion, no deviations or exceptions to the scope of work outlined in ASTM E 1527-13 have been made with the exception of the following:

- We were not able to access the Site, and as such, our site reconnaissance was limited to observations made from public rights-of-way;
- The owner/key site manager was not available for interview; and
- A completed User Questionnaire has not been received as of the time of this report.

1.3 Terms, Conditions and User Reliance

This Phase I ESA was conducted pursuant to the accepted Proposal for Services and the Terms and Conditions established therein between the Client and Sanborn Head. This report was prepared for the exclusive use of the Client in connection with potential purchase of the Site. No other party is entitled to rely on this document without the prior express written consent of Sanborn Head and the Client. Upon request, terms and conditions under which reliance can be extended to other parties will be reviewed with the Client.

2.0 RECORDS REVIEW

Sanborn Head reviewed reasonably ascertainable (as defined in ASTM 1527-13) records to:

- Identify characteristics of the Site's physical setting;
- Establish whether the Site or nearby properties are identified on lists (databases) maintained by government agencies for the presence or potential presence of RECs;
- Identify whether documents provided by the User, Owner, or Key Site Manager provide information relative to the physical setting of the Site and/or indicate the presence of RECs;
- Establish whether information maintained by the State and local regulatory agencies and supplemental to what is included in the environmental database search report provides evidence related to potential RECs; and

- Establish a historical record of prior Site use.

In our opinion, the information obtained from the files/records review is sufficient to meet the evaluation criteria specified in ASTM E 1527-13.

2.1 Physical Setting

Records related to the physical setting of the Site reviewed for this ESA included topographic maps, aerial photographs, and the Physical Setting Addendum provided by EDR, copies of which are provided in Appendix B. Based on the review of these records, a physical setting description of the Site and vicinity is provided in the table below.

Site Topography and Drainage	The elevation of the Site is approximately 210 feet above Mean Sea Level (MSL). The Site elevation slopes gently downward to the northwest.
Site Vicinity Topography	The topographic map, which was used as the base map for Figure 1, shows that the elevation rises from approximately 210 feet at the Site to approximately 340 feet above MSL approximately 0.25 miles to the northeast of the Site, and to approximately 300 feet above MSL approximately 1 mile to the south of the Site.
Nearest Water Body, Direction and Distance	According to maps provided through the EDR search, there appears to be a wetland located in the middle of the Site. There are several other smaller bodies of water to the south, but the closest prominent body of water appears to be Hammond Pond which is located approximately 0.5 miles west of the Site. In addition, small ponds associated with the Brookline Gold Course are located approximately 0.3-miles to the south of the Site.
Site Stormwater	On-Site stormwater collection infrastructure and the direction of stormwater flow was not observed, as the Site visit was constrained to perimeter observations made from public rights-of-ways.
Site Geology	Based on the EDR Physical Setting addendum and a review of MassDEP files for nearby properties, the Site geology generally consists of a fine sandy loam overlying a gravel layer.
Inferred Depth to Groundwater	Based on previous investigations performed in the vicinity of the Site, groundwater at the Site is assumed to be encountered at approximately 11 feet below ground surface (bgs). However, based on the wetland observed on maps from the EDR search, the depth to groundwater on-Site may vary from the surrounding properties and, in general, would be expected to be shallower.
Inferred Direction of Groundwater Flow	Based on topographic gradients and EDR Physical Setting information, groundwater at the Site is assumed to flow to the northwest.
Flood Zone Designation	Based on the MassDEP Phase I Site Assessment Map, there are no FEMA 100-year flood plains located within a 1-mile radius of the Site.
Sensitive Human Receptors	According to the MassDEP Phase I Site Assessment Map, sensitive human receptors include the Pine Manor College to the east of the Site, the Beaver Country Day School to the southwest of the Site, and the Brimmer & May School to the northwest of the Site. The listed sensitive human receptors are located within a 0.25-radius of the Site.
Sensitive Environmental Receptors	Based on the MassDEP Phase I Site Assessment Map, a small pond is located in the center of the Site and is listed on the National Wetland Inventory. There are several other smaller wetlands within a 0.5 mile radius of the Site located to the south. Two Natural Heritage and Endangered Species Program (NHESP) are located within a 0.5-mile radius to the south of the Site.

2.2 Environmental Database Search

2.2.1 Methodology

Sanborn Head contracted EDR to perform a database search on November 22, 2017. The database search reviews federal and state standard environmental record sources in accordance with ASTM E 1527-13 search distances.

Information related to properties identified in standard environmental sources and located within the approximate minimum search distances was reviewed to assess the likelihood of an impact to Site soil, groundwater, or vapor from migrating hazardous substances or petroleum products. The information used in this assessment included:

- Distance from the Site boundary[2]
- Anticipated direction of groundwater flow;
- Regional and local geologic conditions;
- Anticipated stormwater and surface water flow directions;
- Presence of utilities or other subsurface structures;
- The presence/absence of documented contaminant releases at the identified sites; and
- The regulatory status of the documented releases.

A summary of our search findings is included herein, and a copy the EDR report is provided in Appendix C.

2.2.2 Results

Several listings were identified for the Site address, as described in the table below. We note, however, that the Site address refers to the Pine Manor College campus, of which this Site is a smaller portion. The Site is located on the northern portion of Pine Manor College and includes the school's recreational baseball field. The Site is not improved by the Pine Manor College buildings. Therefore, the listings below may refer to other portions of the Pine Manor College campus and not to the Site itself.

Summary of On-Site Database Listings	
Key Database[3]	**Summary**
HW GEN	Pine Manor College is listed under EPA ID MV6177317033 with a Resource Conservation and Recovery Act generator status of Very Small Quantities Generated (VSQG). No additional information was provided.

[2] For potential to impact Site soil vapor, listings that indicated releases of petroleum products and non-petroleum chemicals of concern located within 0.1 and 0.3 miles of the Site, respectively, were considered.

[3] A list of databases and acronyms can be found in the EDR Radius Map™ Report in Appendix B.

FINDS	Pine Manor College is listed in the Resource Conservation and Recovery Act Non-Generator and Facility Index Search (FINDS) databases between January 2006 and April 2015. No additional information was provided.
Asbestos	Pine Manor College is listed under EDR ID S119882360. 100 L.F. of Asbestos was removed from the campus on July 3, 2013. Asbestos abatement activities were performed at Pine Manor College buildings between 2002 and 2015.

EDR identified several listings for surrounding properties in various databases within the minimum search distances from the Site. Listings for adjoining properties and/or properties that represent a potential migration risk to the Site are summarized in the table below. The remaining listings are not considered likely to have releases of hazardous substances and/or petroleum products with the potential to migrate to the Site property.

Facility Name / Distance / Direction from Site	Anticipated Hydrogeologic Location Relative to Site[4] / Potential Migration Pathway	Summary
Randolph 375 Heath Street Brookline, MA Approximately 400 feet to northeast of the Site	Upgradient Groundwater	This site is listed in Leaking UST (LUST) and RELEASE databases. The site is associated with Massachusetts Department of Environmental Protection (DEP) Release Tracking Number (RTN) 3-12797 and is discussed in further detail in Table 1.
Route 9 1075 Boylston Street Brookline, MA Approximately 800 feet northwest of Site	Crossgradient Groundwater	This listing is included in the HWS and RELEASE databases and is associated with RTN 3-23648. See Table 1 for further information.
Chestnut Hill Benevolent Association 910 Boylston Street Newton, MA Approximately 0.25 miles northeast of the Site	Crossgradient Groundwater	This site is listed in the LUST and HWS databases. The listing of this site in these databases is associated with RTN 3-24837 is discussed further in Table 1.
Power House 910 Boylston Street, Newton, MA Approximately 0. 25 miles southwest of the Site	Crossgradient Groundwater	This site is listed in the RELEASE and HW GEN databases. The listing of this site in these databases is associated RTN 3-25358 and is discussed further in Table 1.

[4] The identification of a surrounding Site as potentially up-gradient, cross-gradient and down-gradient assumes the direction of groundwater provided in Section 2.1 of this report.

None of the listings are considered to indicate a REC in connection with the Site property. Based on the information available from EDR, additional files were reviewed for several listings, as summarized in Section 2.3.

2.3 State/Federal Regulatory Agency Documents

On November 22 through November 27, 2017, Sanborn Head reviewed documents available from DEP for the Site and adjoining properties identified in the EDR Radius Map Report, or through other on-line search methods. Off-Site files were reviewed if the site was adjoining the subject Site, or if we identified the potential for hazardous substance or petroleum migration from these sites to the Site based on our understanding of hydrogeologic or geologic conditions and/or the potential for vapor migration. Relevant information obtained during the regulatory agency file review is provided in Appendix E.

A summary of the DEP file review sites and their locations relative to the Site is provided in Table 1, and a figure showing the reviewed sites' approximate locations relative to the subject Site is provided as Figure 3. None of the information reviewed is considered to indicate a REC in connection with the Site property.

Several other releases have occurred within the Site vicinity (approximately 1 mile radius). Based on data and reports reviewed, these release sites have been remediated, have achieved regulatory closure, are located in apparent downgradient or crossgradient locations from the subject Site, and/or were small spills located at a significant distance from the subject Site. Therefore, in Sanborn Head's opinion, the other releases that were reviewed do not appear to present a significant risk to Site soil, groundwater, or vapor quality.

2.4 Local File Review

The findings of our local file review are summarized below. Several files were identified for the Site address, as described in the table below. We note, however, that as previously discussed the Site address refers to the Pine Manor College campus, of which the subject Site comprises a smaller portion. The Site is located on the northern portion of Pine Manor College and includes the school's recreational baseball field. The Site is not improved by the Pine Manor College buildings. Therefore, the listings below may refer to other portions of the Pine Manor College campus and not to the subject Site itself. Select information obtained during the local file review is included in Appendix E.

Office / Types of Information Available	Summary of Available Information
Assessor's Office/ Assessor's Card and Map	The Site is identified as parcel ID 440-39-01 by the Town of Brookline Assessors Office.
Health Department	No relevant information available
Fire Dept. / UST Information, Fires, Releases	The following records were available for the Site address: ■ Several temporary propane storage permits for the purpose of heating event tents. ■ Application for Gasoline License dated April 13, 1966 related to a 500-gallon UST. Based on a plot plan provided as part of the application, the UST does not appear to be located on the Site. Receipt of Disposal of Underground Steel Storage Tank dated June 10, 1997. The disposal

Office / Types of Information Available	Summary of Available Information
	documentation appears to be related to the 500-gallon UST described above. ■ Certificate of Completion for the installation of fuel burning equipment from the Town of Brookline dated November 9, 1982. A 1,000-gallon oval, steel UST is listed on the certificate. ■ Application and Permit for the removal of a 12,000-gallon tank that previously stored No. 2 fuel oil dated September 30, 1999. The location of the tank on the Pine Manor College campus is unclear from the documentation reviewed. ■ Application and Permit for the removal of a 15,000-gallon tank that previously stored No. 2 fuel oil dated September 30, 1999. The location of the tank on the Pine Manor College campus is unclear from the documentation reviewed. ■ Memorandum from the Brookline Fire Department dated October 27, 1999 that a representative of the Fire Department observed the removal of a UST. No permit number was referenced. The remarks included the description of various utilities and a 15,000-gallon tank. ■ Receipt of Disposal of Underground Steel Storage Tank dated October 26, 1999. The permit number is the same as the 12,000-gallon tank described above. ■ Structural Evaluation for UST Removal – West Street Boiler Room letter dated October 28, 1999 by Rizzo Associates, Inc. The letter concludes that a 15,000-gallon UST should be closed-in-place based on the risk of structural damage to the brick masonry structure adjacent to the UST. Based on the structure described in the letter, it appears that the UST described in the letter is not located on the subject Site. ■ Analytical laboratory report for one soil sample collected on October 29, 1999 identified as Comp-1. The analytical results are for extractable petroleum hydrocarbons (EPH) and volatile petroleum hydrocarbons (VPH), which were not detected above laboratory reporting limits. It is unclear from the documentation reviewed where sample Comp-1 was collected. ■ Commonwealth of Massachusetts Department of Fire Services Notification for Removal or Closure of In Place Storage Tanks Regulated Under 527 CMR 9.00 form dated March 10, 1999. Four tanks are listed on the form: Tank No. 1 (3,000-gallon gasoline), Tank No. 2 (1,000-gallon heating oil), Tank No. 3 (2,000-gallon heating oil), and Tank No. 4 (1,000-gallon heating oil). Tanks 1, 3, and 4 were removed from the ground on February 24, 1999 and Tank 2 was removed from the ground on March 8, 2017. The locations of the tanks were noted as "various locations on campus." Environmental Science Services (ESS) was listed as the company performing the contamination assessment for Tanks 1, 2, and 4. No company or agency was listed as performing the contamination assessment Tank 3. Evidence of a leak was not checked for Tanks 1 and 3, but evidence of a leak was checked for Tanks 2 and 4. Mass. DEP was not notified for the four tanks. Tanks 2

Office / Types of Information Available	Summary of Available Information
	and 4 were listed as "LRA[5]" under the Mass. DEP Tracking number. Documentation of the LRA was not observed during the file review. Tank 3 was listed as not being closed in accordance with 527 CMR 9.00. ■ Application and Permit for the removal of four USTs (Tanks 1-4 described above) dated February 17, 1999. The locations of the tanks on the Pine Manor College campus is unclear from the documentation reviewed. The permit numbers are 99-36 through 99-39. ■ Memorandum from the Brookline Fire Department dated March 8, 1999 that a representative of the Fire Department observed the removal of a UST removed under permit #99-37. The Memorandum stated that no contamination was observed and that a Licensed Site Professional (LSP) was at the site. No additional information was included. ■ Three Receipt of Disposal of Underground Steel Storage Tank forms dated February 24, 1999. The permit numbers are listed as 9936391, 9936392, and 9936393, which do not correspond to permit numbers reviewed in other documentation. ■ Form UST FP-290R dated December 27, 2016. A 15,000-gallon diesel fuel storage tank was closed-in-place on November 29, 2016 with slurry mix. The estimated date of last use of the tank was December 31, 1999. Evidence of a leak was not checked on the form and no company or agency was listed as performing the contamination assessment. ■ Underground Storage Tank Closure Report prepared by the Vertex Companies, Inc. (Vertex) dated December 27, 2016. The report documents the closure-in-place of an inactive 15,000-gallon UST located adjacent to the West Dorms. Based on investigations by Vertex, the tank appeared to have been previously closed-in-place. Vertex collected soil and groundwater samples and the results did not exceed applicable MCP standards. The closed-in-place tank does not appear to be located on the Site. ■ The Underground Storage Tank Closure Report described above included reference to an Environmental Site Assessment (ESA) prepared by Vertex in April 2008. According to documentation in the Closure Report, the 2008 ESA (referenced in the Vertex Closure Report) by Vertex identified eight historical USTs lacking closure documentation. Sanborn Head was not provided a copy of the 2008 ESA.

[5] We assume that LRA stands for Limited Removal Action, which is defined in the Massachusetts Contingency Plan (MCP) as the removal and disposal of up to 100 cubic yards of contaminated soil solely by the release of oil (or up to 20 cubic yards of soil contaminated by hazardous material) prior to notification to Mass DEP of a "120 Day Notification" releases described in 310 CMR 40.0315. Records required as part of an LRA include documentation of the concentrations of oil and/or hazardous material in the soil at the disposal site following a LRA.

Office / Types of Information Available	Summary of Available Information
Building Dept. / Permits	Various building permits for renovations, expansions, plumbing and gas fitting, and electrical work were available for the Site from 1966 to 2016. Additionally, a memo from the Board of Selectman's office dated May 9, 1966 granting permission for the storage and use of gasoline in one 500 gallon UST on site.
Planning/Zoning / Zoning Map, Applications	The Site is zoned as S40, Single Family, under Use Code 942: PSCHOOL, in the Town of Brookline, Massachusetts.

Available records indicate that several underground storage tanks (USTs) were located on the Site address. As described in the Underground Storage Tank Closure Report prepared by the Vertex dated December 27, 2016, eight historical USTs lacking closure documentation were identified at the Site address. Based on our review of the available records, it is unclear if these tanks are located on the subject Site, or within the larger campus area outside the subject Site. According to Brookline Fire Department records, some of the tanks located on the Site address may have been removed without closure documentation. Additional documentation pertaining to the specific location and closure of the tanks was unavailable. As previously noted, Sanborn Head was not able to contact the Site owner or perform a Site reconnaissance on the property. As such, based on the lack of closure documentation pertaining to the USTs, the uncertainty of the locations of the USTs, and the potential presence of contamination associated with these former USTs is considered a REC.

2.5 Historical Use Information

Sanborn Head reviewed historical mapping (e.g., fire insurance and USGS topographic maps) and aerial photographs. Historical topographic maps and aerial photographs were available for the Site and vicinity spanning from 1893 to 2012. Other historical sources reviewed as part of this assessment included an EDR City Directory report. Sanborn Fire Insurance Maps are not available for the Site.

The following key information was available in our review of the historical sources:

- **Site:** The Site has been developed since at least 1925 when the Site was occupied with a greenhouse. The green house was removed from the Site between 1950 and 1957, and a baseball diamond was constructed on the northwest corner between 1986 and 1995.
- **Adjoining Properties:** The properties adjoining to the south and west of the Site have been developed since at least 1938 when the area appeared to have been occupied by cleared land and residences. By 1955, the property to the north of the Site appears to have been developed.
- **Surrounding Area:** The Site vicinity has been developed since at least 1893. The area surrounding the Site is primarily used for residential and commercial purposes.

None of the information reviewed is considered to indicate a REC in connection with the Site property.

Copies of documentation obtained during the Site history review are provided in Appendix B.

2.6 User Provided Information

As required to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, Sanborn Head requested information from the User of this Phase I ESA (Client). At the time of this report, a User Questionnaire had not been received.

3.0 SITE RECONNAISSANCE

A Sanborn Head representative performed a Site reconnaissance from the perimeter of the Site from public right-of-way's to obtain evidence of RECs potentially present in connection with the Site, as summarized in the table below.

Date of Site Visit	December 7, 2017
Sanborn Head Representative(s)	Ms. Melanie Hock
Accompanying Facility Individual(s)	None
Limiting Conditions	We were not able to access the Site, so the site reconnaissance was limited to observations made from public rights-of-way's

A photograph log from the Site reconnaissance is included in Appendix G. A summary of the Site reconnaissance findings is presented below.

Number of On-Site Structures	None observed from the perimeter of the Site
Number of Stories, Mezzanine Levels	Not applicable
Basements/Crawl Spaces	Not applicable
Structure Size (square feet)	Not applicable
General Construction	Not applicable
Date of Construction	Not applicable
Roads, Streets, Parking Facilities on the Site	None observed from the perimeter of the Site
Roads Adjoining the Site	The Site is bordered by Heath Street to the North and Woodland Road to the west.
Railroad Lines /Spurs On or Adjacent to the Site	None evident from the perimeter of the Site

Land uses in the area of the Site include residential and institutional uses. The abutting properties include:

North	Residential neighborhood
South	Pine Manor College
East	Residential neighborhood
West	Residential neighborhood

As stated above, due to access restrictions, the Site reconnaissance consisted of observation made from the public right-of-way. Due to this constraint, the observations made by the Sanborn Head representative are limited.

Current and former utilities that service the Site include the following:

Electricity	Town of Brookline
Natural Gas	National Grid
Water	Town of Brookline
Sewer	Town of Brookline
Wastewater	N/A

4.0 INTERVIEWS

4.1 Interviews with Local Government Officials

The following individuals were interviewed for this ESA:

Name	Title	Agency
Andrew Bluestein	Lieutenant	Brookline Fire Department
Wendy Machmuller	Administrative Assistant	Brookline Health Department
Kristen Curtis	Office Manager	Brookline Building Department
Sarah Bernadus		Brookline Town/City Clerk
Jamie Tizburt		Brookline Assessor's Office
Karen Martin	Director	Brookline Planning/Zoning Department

Relevant information obtained from local officials is presented throughout this report, where applicable.

5.0 EVALUATION

5.1 Findings, Opinion, and Conclusions

We have performed a Phase I Environmental Site Assessment in substantial conformance with the scope and limitations of ASTM Practice E 1527-13 of the Site located at 400 Heath Street in Brookline, Massachusetts. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report. This assessment has revealed the following RECs in connection with the Site:

- Available records that were reviewed by Sanborn Head indicate several underground storage tanks (USTs) were located on the subject Site. As described in the Underground Storage Tank Closure Report prepared by the Vertex Companies, Inc. (Vertex) dated December 27, 2016, eight historical USTs lacking closure documentation were identified at the Site address in 2008. In addition, according to Brookline Fire Department records, also indicate that some of the USTs may have been removed without closure documentation. We note, however, that the Site address refers to the Pine Manor College campus, of which the subject Site comprises a smaller portion. The subject Site is located on the northern portion of Pine Manor College and includes the school's recreational baseball field. However, due to the lack of supporting documentation it is not clear if the USTs are located on the subject Site on the other portions of the campus. As such, since additional documentation pertaining to the specific location and closure of the tanks was unavailable, and Sanborn Head was not able to contact the Site owner or perform a Site reconnaissance on the property as part of this ESA, the lack of closure documentation pertaining to the USTs, the uncertainty of the locations of the USTs, and the potential presence of contamination associated with these former USTs is considered a REC.

A site reconnaissance (on the property) in addition to an interview with a key site manager would help to better understand the presence of the USTs and if a subsurface investigation would be necessary to assess the soil and groundwater in the former tank areas. If the site walk and interview are not sufficient, then additional field investigations may be necessary to help reduce uncertainty related to the USTs, how they were closed, and potential impacts to soil and/or groundwater from the USTs.

5.2 Data Gaps

ASTM E 1527-13 requires that data gaps in the research performed be identified. Due to the nature of the transaction of this property, the Client requested that Sanborn Head not contact the Site owner or perform an on-Site reconnaissance. Sanborn Head's Site reconnaissance observations were made from the perimeter of the Site from the public roads. The lack of a Site owner interview and on-Site reconnaissance is considered a data gap. In addition, a completed User Questionnaire has not been received as of the time of this report, and this is also considered a data gap.

5.3 Signatures of Environmental Professionals

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 C.F.R. 312. We have the specific qualifications based on education, training, and experience to assess a Site of the nature, history, and setting of the subject Site. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Stan S. Sadkowski, P.E.
Senior Vice President

Kent B. Walker, P.E.
Project Manager

6.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Stan S. Sadkowski, P.E.

Mr. Sadkowski has over 13 years of experience on site investigations, geo-environmental studies and hydrogeological studies, in addition to, environmental assessment and remediation. Stan oversees the implementation and execution of engineering and remediation activities for small to large developments. He is experienced in performing and reviewing environmental due diligence activities for real estate transactions. He has extensive experience in the field, including observation of soil borings and monitoring well installations using a variety of drilling techniques, remedial construction, construction monitoring, underground storage tank and contaminated soil removal, environmental sampling including: soil, groundwater, sediment, and surface water. Stan designs and implements hydrogeologic field programs to evaluate soil permeability and aquifer characteristics. Mr. Sadkowski is a registered Professional Engineer (P.E.) in the Commonwealth of Massachusetts.

Kent B. Walker, P.E.

Kent Walker has six years of experience in performing Phase I Environmental Site Assessments, vapor intrusion assessments, stormwater management, and hydrogeologic projects. Mr. Walker has performed environmental site investigations of commercial and industrial facilities and has evaluated environmental conditions to support development options and/or remedial alternatives. He has experience preparing regulatory documents under the Massachusetts Contingency Plan (MCP) and the Connecticut Remediation Standard Regulations. Mr. Walker has broad experience with field investigations, including low-flow groundwater sampling, soil, surface water and subslab vapor, soil vapor, indoor air sampling, and integrity testing. He is a registered professional environmental engineer in Massachusetts.

TABLE

Table 1
Summary of DEP File Review Information
400 Heath Street
Brookline, Massachusetts

Figure 3 ID	RTN	Site Name	Address	Distance and Direction from Site	OHM Released and Suspected Source	Media Impacted	Response Actions	Regulatory Status and Date
A	3-12797	Randolph	375 Heath Street, Brookline, MA	Adjacent to the north of the Site across Heath Street	Petroleum hydrocarbons Former fuel oil UST	Soil	The UST was excavated and removed from the site and approximately 6 cubic yards of soil were excavated and shipped off-site for disposal.	Class A-2 RAO October 31, 1995
B	3-23648	Route 9	1075 Boylston Street, Brookline, MA	Approximately 650 feet to the northeast of the Site	Petroleum Hydrocarbons and PCBs Utility related incident	Soil and Groundwater	Absorbent pads were applied to the area and the leak was repaired. Approximately 0.1 cubic yards of impacted soil were excavated and placed in a 55-gallon drum for off-site disposal.	Class A-2 RAO October 28, 2004
C	3-24451	No Location Aid	132 Yarmouth Road, Brookline, MA	Approximately 600 feet to the southeast of the Site	Petroleum hydrocarbons Fomrmer fuel oil UST	Soil	Approximately 20 cubic yards of impacted soil were excavated and shipped off-site for disposal	Class A-2 RAO March 31, 2005
D	3-20733	No Location Aid	640 Hammon Street, Brookline, MA	Approximately 500 feet to the west of the Site	Petroleum hydrocarbons and lead Serveral former USTs and historic use of the property as a blacksmith shop	Soil	Approximately 6,000 tons of lead and/or petroleum impacted soil were excavated and shipped off-site for disposal.	Class A-2 RAO September 14, 2001
E	3-16950	Hammond Street & Chestnut Hill	639 Hammond Street, Brookline, MA	Approximately 675 feet to the west of the Site	Petroleum hydrocarbons, PAHs and metals Former USTs and urban fill	Soil	Approximately 4,000 tons of impacted soil were excavated and shipped off-site for disposal.	Class A-2 RAO March 28, 2008
F	3-28316	No Location Aid	71 Glenoe Road, Brookline, MA	Approximately 660 feet to the southwest of the Site	Petroleum hydrocarbons Former AST	Soil and Groundwater	The AST, approximately 40 tons of impacted soil, and 17,000 gallons of impacted water were removed from the site for diposal.	Class A-2 RAO July 6, 2009
G	3-24837	Chestnut Hill Benevolent Association	910 Boylston Street, Newton, MA	Approximately 650 feet to the northeast of the Site	Petroleum hydrocarbons and PAHs Fuel oil UST	Soil	No response actions were completed.	Class B-1 RAO May 5, 2005
H	3-25358	Power House	910 Boylston Street, Newton, MA	Approximately 650 feet to the northeast of the Site	Petroleum hydrocarbons and lead Former fuel oil UST and urban fill	Soil and Groundwater	The UST was excavated and removed from the site and approximately 1,600 tons of impacted soil were excavated and shipped off-site for disposal.	Class A-2 RAO September 6, 2006
I	3-19813	No Location Aid	1180 Boylston Street, Brookline, MA	Approximately 700 feet to the northwest of the Site	Petroleum hydrocarbons Former USTS and use of the site as a gas station	Soil and Groundwater	Approximately 11,000 gallons of water/LNAPL have been extracted and shipped off-site for disposal between November 2004 and December 2010.	REMOPS September 8, 2017
J	3-15731	Wieschhoff Residence	30 Norfolk Road, Brookline, MA	Approximately 820 feet to the north of the Site	Petroleum hydrocarbons Former fuel oil UST	Soil and groundwater	The UST was excavated and removed from the Site along with approximately 150 tons of imapcted soil and two 55-gallon drums of oil and water which was purged from on-site monitoring wells.	Class A-2 RAO November 23, 1998

Notes:
1. Information provided in this table was obtained from files downloaded from the Massachusetts DEP website between November 22 and 27, 2017.

DEP = Department of Environmental Protection
RAO = Response Action Outcome
RTN = Release Tracking Number
UST= Underground Storage Tank
AST = Aboveground Storage Tank
LNAPL = Light Non-aqueous Phase Liquid
Class A-2 RAO = a permanent solution has been achieved and contamination has not been reduced to background
Class B-1 RAO = remedial actions have not been conducted because a level of No Significant Risk exists and an Activity and Use Limitation is not required.
PCBs = Polychlorinated biphenyls
REMOPS = Remedial Operation Status
PAH = Polycyclic Aromatic Hydrocarbons

APPENDIX A

LIMITATIONS

APPENDIX A
LIMITATIONS

1. The observations described in this report were made under the conditions stated herein. The conclusions presented in this report were based solely upon the services described herein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

2. In preparing this report, Sanborn Head has relied on certain information provided by state and local officials and other parties referenced herein, and on information contained in the files of state and/or local agencies available to us at the time of the site assessment. Although there may have been some degree of overlap in the information provided by these various sources, we did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment.

3. Should additional information on environmental conditions at the site which is not contained in the report be obtained, such information should be brought to Sanborn Head's attention. We will evaluate such information and, on the basis of our evaluation, may modify the conclusions stated in this report.

4. Observations were made of the site and of structures on the site as indicated within the report. Where access to portions of the site or to structures on the site was unavailable or limited, Sanborn Head renders no opinion as to the presence of hazardous material or to the presence of indirect evidence relating to hazardous material in that portion of the site or structure. In addition, Sanborn Head renders no opinion as to the presence of hazardous material or to the presence of indirect evidence relating to hazardous material where direct observation of the interior walls, floor, or ceiling of a structure on a site was obstructed by objects or coverings on or over these surfaces.

5. Unless otherwise specified in the report, Sanborn Head did not perform testing or analyses to determine the presence or concentration of polychlorinated biphenyls (PCBs) at the site or in the environment at the site.

6. Unless otherwise specified in the report, the following optional non-scope considerations included in Section 13.1.5 of the ASTM standard were not addressed in our scope of services: asbestos-containing building materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, biological agents and molds.

7. The purpose of this report was to assess the physical characteristics of the subject site with respect to the presence in the soil or groundwater of hazardous material as defined by ASTM E1527-13. No specific attempt was made to check the compliance of present or past owners or operators of the site with federal, state, or local laws and regulations, environmental or otherwise.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Sanborn Head & Associates were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Sanborn Head & Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
EXXON DIV OF CFI 700	1180 BOYLSTON ST	WNW 1/8 - 1/4 (0.249 mi.)	C17	139

State- and tribal - equivalent CERCLIS

SHWS: Contains information on releases of oil and hazardous materials that have been reported to DEP.

A review of the SHWS list, as provided by EDR, and dated 09/01/2017 has revealed that there are 44 SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Solid Waste Facility Database/Transfer Stations.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

FINDS:

Registry ID: 110008413582

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal Brownfields sites

BROWNFIELDS: Completed Brownfields Covenants Listing

Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

Date of Government Version: 04/05/2017

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

MERCURY: Mercury Product Recyling Drop-Off Locations Listing

A listing of locations, collecting and recycling for mercury-added products. Mercury is toxic to the human nervous system, as well as fish and animals. Mercury can enter the body either through skin absorption or through inhalation of mercury vapors. At room temperature, small beads of mercury will vaporize.

Date of Government Version: 01/31/2017

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

BROOKLINE
400 HEATH STREET
CHESTNUT HILL, MA 02467

TARGET PROPERTY COORDINATES

Latitude (North):	42.321584 - 42˚ 19’ 17.70’’
Longitude (West):	71.156934 - 71˚ 9’ 24.96’’
Universal Tranverse Mercator:	Zone 19
UTM X (Meters):	322261.2
UTM Y (Meters):	4687521.5
Elevation:	203 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5646211 NEWTON, MA
Version Date:	2012

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

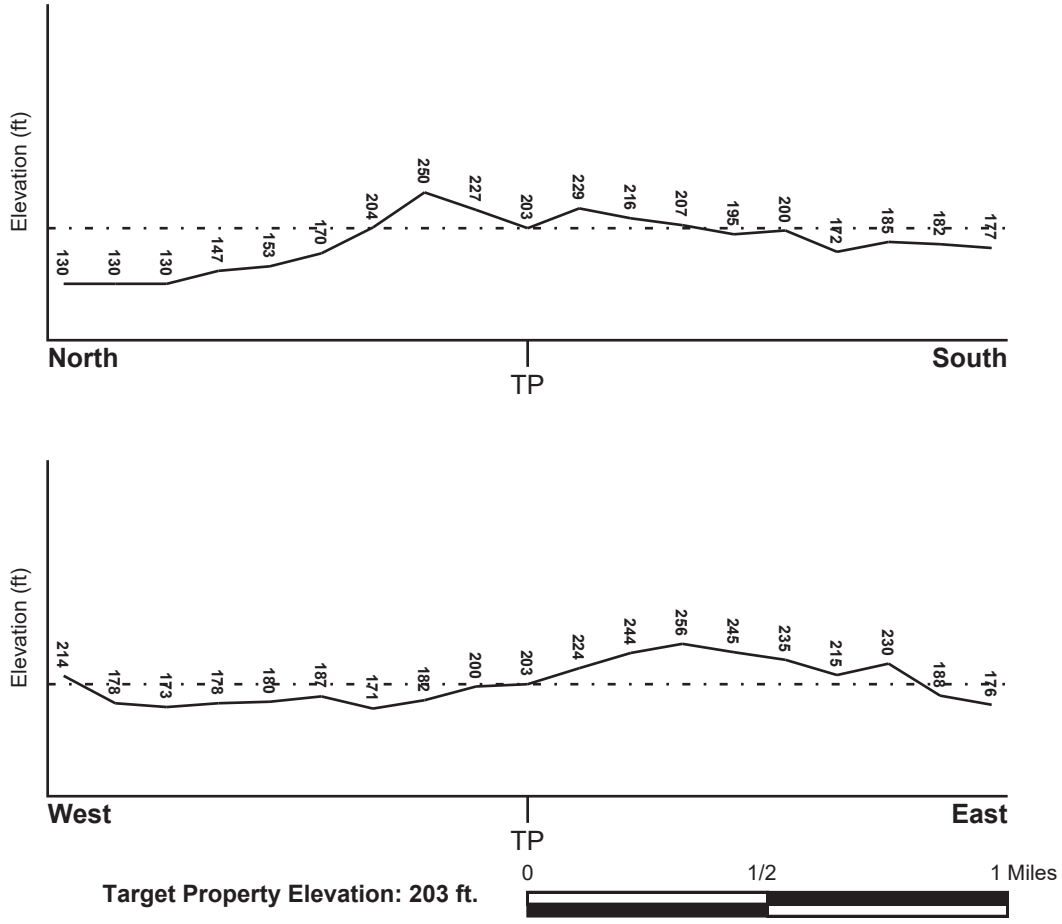
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

25017C0566E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NEWTON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile NE	N
3	1/2 - 1 Mile West	Varies
1G	1/2 - 1 Mile NE	N
2G	1/2 - 1 Mile West	Varies

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Hollis

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C/D - Drained/undrained hydrology class of soils that can be drained and classified.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	fine sandy loam	Not reported	Not reported	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5
2	3 inches	14 inches	gravelly fine sandy loam	Not reported	Not reported	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5
3	14 inches	18 inches	unweathered bedrock	Not reported	Not reported	Max: 0.9999 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C/D - Drained/undrained hydrology class of soils that can be drained and classified.

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Udorthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: 141.14 Min: 0.42	Max: Min:
2	5 inches	59 inches	variable	Not reported	Not reported	Max: 141.14 Min: 0.42	Max: Min:

Soil Map ID: 4

Soil Component Name: Charlton

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 38 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	fine sandy loam	Not reported	Not reported	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5
2	5 inches	35 inches	fine sandy loam	Not reported	Not reported	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5
3	35 inches	59 inches	fine sandy loam	Not reported	Not reported	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5

Soil Map ID: 5

Soil Component Name: Newport

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 617-292-5907

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers
Source: Executive Office of Environmental Affairs

Public Water Supply Database: The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

OTHER STATE DATABASE INFORMATION

Areas of Critical Environmental Concern Datalayer: The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers Datalayer: The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by a EPA hydrogeologist.

Aquifers Datalayer: MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas: Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature, representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

DEP Approved Zone IIs Datalayer: The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is "that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary)." These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.

- Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line.
- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.
- Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

RADON

State Database: MA Radon
Source: Department of Health
Telephone: 413-586-7525
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Brookline, MA 02146

Re: Structural Evaluation for UST Removal – West Street Boiler Room
Pine Manor College
Brookline, Massachusetts

Dear Chief Spillane:

On October 28, 1999, Rizzo Associates, Inc. personnel performed a site visit and inspection of the open excavation at the West Street Boiler Room that is located on the campus of Pine Manor College. The purpose of the site visit and inspection was to evaluate whether the 15,000-gallon underground storage tank (UST) that is located adjacent to the structure could be excavated without potentially causing structural damage to the brick masonry and concrete structure that encloses the boiler room and is part of a student dormitory. The evaluation would also include the alternative for closure of the UST in-place.

Our inspection of the open UST excavation revealed the following: the site soils were comprised of sands with some gravel and little silt; the top of the UST was located at approximately four feet below the ground surface; the UST dimensions were 10.5 feet in diameter and approximately 22.5 feet long; the UST was used for the storage of #2 fuel oil; the ends of the UST were located within three feet of the structural walls and basement of the building and in close proximity to a sewer line; the unreinforced concrete basement walls for the building and structural footings are located approximately 8 feet below the ground surface; the unreinforced brick masonry building walls adjacent to the UST range from approximately 5 feet to 25 feet in height and are configured in a series "L" shaped steps that reduce the width of the building; the UST was overlain by telephone and electrical utilities; and an aboveground transition gas main is located within 2.5 feet of the UST end wall.

Our analysis of the potential excavation and removal of the UST based on the above site conditions is as follows. Due to the depth to the UST bottom (approximately 14.5 feet below the ground surface) and the depth to the adjacent building foundation and footings, the UST removal will require excavation to a depth (estimated at fifteen feet below the ground surface) that will be approximately 6 feet below the primary load bearing components of the brick and masonry

2017/12/06

building. Sufficient horizontal distance for slope stabilization of the sandy soils (requires a minimum 1:1 slope or at least six feet from the footing) is not available and utility types with extremely close locations (over and adjacent to the UST) make standard shoring and bracing techniques for the proposed excavation infeasible. Therefore, a structurally stable excavation cannot be constructed at the UST site. It is our opinion that based on the observed soil conditions and the available horizontal work distances at the UST site, that an excavation of the UST without structural stabilization of the sandy soils would have a high potential for caving and excavation side wall failure. The tight working conditions and the normal environmental testing procedures at the UST site will limit the speed with which the excavation can be completed thus allowing the sandy soils more time to dry and become friable after being exposed to the atmosphere which will raise the risk of excavation side wall failures. Other factors such as groundwater intrusion, excavation cycles in wet conditions, the potential for water utility failure with scouring of the excavation side walls, vibration forces from the excavating machinery and the operation boiler plant will also raise the risk of an excavation side wall failure. An excavation side wall failure with undermining of the concrete foundation would destabilize the main structural components of the building (the concrete foundation and the brick masonry walls) that bear substantial static loads and place these structures in a "tension force" condition. Unreinforced concrete and brick masonry structures can withstand great compressive forces but fail easily under comparatively very small tension forces. Secondary risks via accidental impact with the aboveground building structures and the utilities (the gas line and gas meters) will also be posed during the UST removal as the heavy equipment lifts the tank away from the excavation if lifting lugs fail or wind forces swing the tank into a structure that is suspended from a lifting chain or cable.

As an alternative to the excavation and removal of the UST, we evaluated in-place closure of the UST. In-place closure of the UST is feasible and the means and methods for the in-place closure will lessen the risk of rupture or damage to the site utilities and aboveground building structural components. In-place closure would require a shallow excavation to clean the tank and remove ancillary piping (approximately four feet deep) and would eliminate the need to excavate below the structural components of the adjacent brick masonry building. Therefore, the risk of structural damage to the building via excavation side wall failures at the UST site would also be eliminated.

It is our opinion that the risk for structural damage to the brick masonry structure by the potential excavation of the UST will be very high based on the location of the UST in close proximity to the structure, the tight work conditions for the excavator, the presence of flowing water utilities with scouring capabilities, the potential groundwater intrusion due to the deep excavation, sandy soil conditions that cannot be structurally stabilized to prevent undermining and resultant damage to brick masonry building components. Therefore, we recommend that the UST at this location be closed in-place in accordance with state and local regulations.

Re: Notification for removal or closure of in place storage tanks regulated under 527 CMR9.00

Dear Mr. Spillane,

Enclosed please find the signed 527 CMR 9.00 form that DEA received when applying for the tank removal permit. Our understanding was to send it for signature by the appropriate city/town that the tank removal was performed in.

If you should have any questions or if we need to send additional copies to other persons we would be happy to, please give us a call at (781) 849-6164.

Very truly yours,

2017/12/06

IN BOARD OF SELECTMEN

At 2 P.M. a public hearing was held on the application of Pine Manor Junior College for a license for the keeping, storage and use of gasoline in one underground tank of 500 gallons capacity at 400 Heath Street, Brookline.

It appeared that due notice of the hearing had been given in accordance with the provisions of law. The applicant was represented by Mr. Paul T. Kirk, Comptroller, Pine Manor Junior College. No one appeared to object and the hearing was closed.

On motion, it was unanimously

VOTED: To grant a license to Pine Manor Junior College (William P. Person, Vice-President for Operations) for the keeping, storage and use of gasoline in one underground tank with a total capacity of 500 gallons at 400 Heath Street, subject to the condition that the requirements of the Town Building Code and the regulations of the Division of Fire Prevention of the Commonwealth of Massachusetts be complied with.

April 13, 1966

Vice President for Operations

Mr. Arthur A. O'Shea
Executive Secretary
Board of Selectmen
Town of Brookline
Brookline, Massachusetts

Dear Mr. O'Shea:

Enclosed please find our application for a gasoline license as well as our check in the amount of $5.00 which we understand is the application fee.

The specific location of the tank will be adjacent to the garages at the rear of 136 Woodland Road which is part of our campus. The diagram on the back of the application gives the location of the tank. We trust the location is acceptable as we have a difficult ledge problem, and this was the only place it could be located without extensive excavation work. There will be an approved gas pump with the proper stanchion around it to protect it from damage. This gas is used for the college vehicles only.

Very truly yours,

William P. Person
Vice President for Operations

State Use Only
A. Facility Number ____
B. Date Entered ____
C. Clerks Initials ____
D. Comments

If a storage facility has UST's which are to remain in use, an entire amended FP-290 (long form) must be filed.

Note: "Facility street address" must include both a street number and a street name. Post office box numbers are not acceptable and will cause a registration to be returned. If geographic location of facility is not provided, please indicate distance and direction from closest intersection e.g., (facility at 199 North Street is located) **400 yards southeast of Commons Road** (intersection).

I. Ownership of Tank(s)

Pine Manor College
Owner Name (Corporation, Individual, Public Agency, or Other Entity)

400 Heath Street
Street Address

Mailing Address (if different from street address)

Chestnut Hill | MA | 02467
City | State | Zip Code

RE: Underground Storage Tank Closure Report
Pine Manor College
400 Heath Street
Brookline, Massachusetts
VERTEX Project No. 40662

Dear Mr. Regan:

The Vertex Companies, Inc. (VERTEX) was retained by Pine Manor College to close an underground storage tank (UST) at the above reference property (the site). The closure activities were performed in accordance with the Massachusetts Department of Environmental Protection (MassDEP) UST Closure Assessment Manual #WSC-402-96 and The Massachusetts Board of Fire Prevention Regulations 527 CMR 9.07. This report and its attachments are submitted as supporting documentation for the closure of a UST located at the site.

The closure activities were performed in accordance with VERTEX proposals P.1606.16_Rev.3 and P.2141.16 dated November 7, 2016. Impacted soil or groundwater was not identified in the area of the UST and no further action regarding the identified UST is recommended.

Please do not hesitate to contact us at your convenience should you have any questions or comments regarding this report or our recommendations. It has been a pleasure working with you on this project.

Sincerely,

The Vertex Companies, Inc.

2017/12/06

1.0 INTRODUCTION

The Vertex Companies, Inc. (VERTEX) was retained by Pine Manor College to close an underground storage tank (UST) at the above -reference property (the site). The closure activities were performed, in accordance with the 310 CMR 80.00 "Massachusetts Department of Environmental Protection (MassDEP) Underground Storage Tank Systems," MassDEP UST Closure Assessment Manual #WSC-402-96, and The Massachusetts Board of Fire Prevention Regulations 527 CMR 9.07. This report and its attachments are submitted as supporting documentation for the closure of a UST located at the site. A Site Locus Map is included as Figure 1 and a Site Schematic depicting the location of the identified UST is included as Figure 2.

2.0 UST ASSESSMENT ACTIVITIES

2017/12/06

A Phase I Environmental Site Assessment (ESA), prepared by VERTEX in April 2008, identified eight historical on-site USTs lacking former closure documentation. Based on the results of the 2008 Phase I ESA, VERTEX was requested to perform a Phase II Limited Subsurface Investigation (LSI) to evaluate for the presence of USTs. On July 25 and 26, 2016, TPI Environmental, Inc. of Hanson, Massachusetts, under the oversight of VERTEX, conducted a geophysical investigation in select areas of the site. The geophysical investigation utilized ground penetrating radar (GPR) and an electromagnetic (EM)-metal detector to identify and/or delineate subsurface anomalies (i.e., USTs and associated piping, UST graves, and utility lines). One of the five areas of the site investigated, identified a potential anomaly indicative of a 15,000-gallon UST adjacent to the West Dorms. Product lines and a manometer line were traced from the basement to the center of the anomaly area. According to historical documents reviewed by VERTEX, a former 15,000-gallon No. 2 fuel oil UST was installed in 1976 at this location.

Following the identification of the UST through the GPR survey, VERTEX oversaw the advancement of two soil borings adjacent to the identified anomaly to assess for potential impacts. Soil borings, VES-108 and VES-109, were advanced to approximately 15.5 and 17 feet below ground surface (bgs), respectively. Soil was screened in the field for total volatile organic compounds (TVOCs) using a photoionization detector (PID), and select soil samples were collected based on field screening results. The results of field screening indicated that TVOCs were not detected at concentrations exceeding 1 part per million by volume (ppmv). Full field screening results are presented in the soil boring logs for VES-108 and VES-109 included in Appendix A.

Soil samples were collected from VES-108 and VES-109, at depths of 10 to 12-feet bgs and 15 to 17-feet bgs, respectively, and analyzed for extractable petroleum hydrocarbons (EPH), target polynuclear aromatic hydrocarbons (PAHs), and volatile petroleum hydrocarbons (VPH) with target volatile organic compounds (VOCs). Laboratory analysis did not detect constituents of concern (COCs) at concentrations exceeding applicable Massachusetts Contingency Plan (MCP) reportable concentrations. Soil analytical results are summarized in Table 1 and the laboratory analytical report is included in Appendix B.

Additionally, soil borings VES-108 and VES-109 were completed as temporary monitoring wells. Groundwater samples were collected from the temporary monitoring wells and were analyzed for EPH with target PAHs, and VPH with target VOCs. Laboratory analysis did not detect COCs at concentrations exceeding laboratory reporting limits or applicable MCP reportable concentrations. Groundwater analytical results are summarized in Table 2 and the laboratory analytical report is included in Appendix B.

2017/12/06

Based on the analytical data collected by VERTEX in July 2016, evidence of a release of fuel oil associated with the identified UST was not identified. However, VERTEX recommended the removal of the identified 15,000-gallon UST in accordance with applicable local and state regulations.

After reviewing GPR scans of the area of the UST, it was determined that three electrical lines run over the UST, a water line runs approximately 2-feet east of the UST, a sanitary sewer line runs approximately 4-feet north of the UST, a storm sewer runs approximately 8-feet east of the UST, and a natural gas line runs approximately 20-feet southwest of the UST. Based on the presence of utilities above and in close proximity to the UST, VERTEX proposed to close the UST in-place in accordance with the MassDEP UST Systems regulation 310 CMR 80.43. Specifically, VERTEX petitioned the MassDEP for permission to close the UST in-place. In accordance with 310 CMR 80.43(3)(a), *"No Owner or Operator shall permanently close a UST system in-place unless it is located under a building and cannot be removed from the ground without first removing the building, or is located that it cannot be removed from the ground without endangering the structural integrity of another UST system, structure, underground piping, or underground utilities."* Mr. Jonathan Noris with VERTEX, a registered Massachusetts civil engineer (license No. 41556), reviewed the available information pertaining to the closure of the UST, and concluded that the UST could not be removed from the ground without undermining the structural integrity of the electric, water, sanitary sewer, and storm water underground utilities. A copy of the request for in-place closure is included as Appendix C.

On November 25, 2016, presumptive approval of the in-place closure of the 15,000-gallon UST was granted by the MassDEP.

3.0 IN-PLACE UST CLOSURE

2017/12/06

On November 29, 2016, A-Zoulias Environmental Enterprises, LLC (A-Zoulias), under the oversight of VERTEX, began UST closure activities. Prior to the start of closure activities, A-Zoulias installed temporary fencing in the vicinity of the UST. To access the UST, a 6-foot by 6-foot area determined to be free of utilities, was excavated. The removed soil was stockpiled on asphalt pavement southwest of the excavation. Stockpiled soil consisted of fine sand and clay, with various building/fill materials (metal, brick, and rebar). At approximately 4-feet bgs, a fill port associated with the 15,000-gallon UST was identified. The fill port cover was not bolted down, and upon removal, A-Zoulias and VERTEX observed that the UST had previously been filled with a slurry mixture.

Due to the previous filling of the UST, VERTEX was unable to collect soil samples from the bottom and sidewalls of the UST in accordance with MassDEP Policy #WSC-402-96. However, visual or olfactory evidence of impacted material was not identified within the stockpiled material. Additionally, soil and groundwater samples collected immediately downgradient of the UST did not identify COCs exceeding applicable MCP standards. Following the uncovering of the UST the stockpiled soil was placed back in to the excavation, and compacted. The surface was completed with an asphalt patch similar to current conditions.

4.0 UST ASSOCIATED PIPING REMOVAL

2017/12/06

A-Zoulias removed the piping associated with the 15,000-gallon UST from within the boiler room of the adjacent dormitory building. Additionally, circulation pumps and filters were removed and transported off-site by A-Zoulias and recycled at WMP Recycling, LLC. in Atkinson, New Hampshire. During the removal of the piping and associated fixtures, approximately seven gallons of No. 2 fuel oil was vacuumed out of the lines, containerized, and transported off-site for disposal under a signed manifest to Cyn Oil Corporation of Stoughton, MA. A copy of the signed manifest is included as Appendix D.

Associated piping was cut flush to the wall, and sealed with hydraulic cement. Also, the vent pipe located on the southeastern corner of the building was cut flush with the ground and sealed with hydraulic cement. The electrical facets of the circulation pumps remained on-site as the wires remained live, and power was unable to be disconnected.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the fact that the UST was previously closed in-place, there were no field indications suggesting a release, and VERTEX's soil and groundwater sampling results did not detect concentrations exceeding applicable MCP standards, VERTEX concludes that no additional response actions or investigation is warranted. In accordance with The Massachusetts Board of Fire Prevention Regulations 527 CMR 9.07, VERTEX submitted the required UST Closure Documentation to the MassDEP. Copies of the submitted documentation is included in Appendix E. Pursuant to the MassDEP Policy #WSC-402-96, additional notification to the MassDEP is not required, and no further action regarding the UST is recommended.

Re: Permission for Closure-In-Place of 15,000-gallon Underground Storage Tank
Pine Manor College
400 Heath Street
Brookline, Massachusetts

Dear Ms. O'Donnell

The Vertex Companies, Inc. (VERTEX) was retained by Pine Manor College to remove a 15,000-gallon No. 2 fuel oil underground storage tank (UST) adjacent to the West Dorms. The UST has been out-of-service for several years and the boiler system operating the dorms is fueled by a natural-gas fired furnace. VERTEX is requesting permission to close the UST in-place in accordance with 310 CMR 80.43 due to the presence of numerous subsurface utilities on top of or in the immediate vicinity of the UST.

In July 2015, VERTEX conducted a Phase II Limited Subsurface Investigation (LSI) at Pine Manor College to assess for the potential presence of current and/or former USTs. The results of a ground penetrating radar (GPR) survey identified a 15,000-gallon UST adjacent to the West Dorms. The GPR survey also identified the presence of three electrical lines running over the UST. The electrical lines run to an electrical transformer located approximately 12-feet north of the UST. Additionally, the GPR survey identified a water line approximately 2-feet east of the UST, a sanitary sewer line approximately 4-feet north of the UST, a storm sewer approximately 8-feet east of the UST, and a natural gas line approximately 20-feet southwest of the UST. A figure depicting the UST and underground utilities is enclosed.

As part of Phase II LSI activities, two soil borings completed as temporary groundwater monitoring wells were installed in the immediate vicinity of the UST to assess the potential for gross impacts associated with a potential release from the UST. Soil and groundwater collected from the immediate vicinity of the UST were sampled for extractable petroleum hydrocarbons (EPH) and volatile petroleum hydrocarbons (EPH). Laboratory results indicated that C19-C36 Aliphatics were identified in one soil sample at a concentration of 12.9 milligrams per kilogram (mg/kg), which is significantly below the RCS-1 Reportable Concentration of 3,000 mg/kg. No other EPH/VPH fractions or associated target volatile organic compounds (VOCs)/polynuclear aromatic

2017/12/06

hydrocarbons (PAHs) were identified at concentrations exceeding laboratory reporting limits. Based on this information, evidence of gross impacts from the UST were not identified.

On Thursday October 6, 2016, Ms. Patrice Plante, Project Manager and Mr. Phillip Platcow, Vice President of Health and Safety with VERTEX meet with Mr. John Hatch of Pine Manor College and our contractor, Mr. Bill Zoulias of A-Z Environmental Enterprises (A-Z), to discuss removal of the 15,000-gallon UST. Mr. Hatch indicated that the electric, water, and sewer services could not be cut-off from the dorms for an extended period of time as the dorms are occupied by students and that removal of the water line would cut off heat to the dorms as the buildings are heated by steam. Mr. Hatch indicated that the dorms were also occupied when school is not in session and during the summer. Mr. Platcow indicated his concern regarding the removal of the UST with respect to a potential electrical hazard associated with the three electric lines located on top of the UST.

Due to the presence of the underground utilities, VERTEX, Pine Manor College, and A-Z agreed to petition the MassDEP for permission to close the UST in-place. In accordance with 310 CMR 80.43(3)(a), "No Owner or Operator shall permanently close a UST system in-place unless it is located under a building and cannot be removed from the ground without first removing the building, or is located that it cannot be removed from the ground without endangering the structural integrity of another UST system, structure, underground piping, or underground utilities."

Mr. Jonathon Noris of VERTEX, a registered civil engineer (license No. 41556), has reviewed the available information pertaining to the closure of the 15,000-gallon No. 2 fuel oil. It is Mr. Noris's opinion that the UST cannot be removed from the ground without undermining the structural integrity of the electric, water, sanitary sewer, and storm water underground utilities. As such, VERTEX is requesting permission to close the 15,000-gallon No. 2 fuel oil UST in-place in accordance with the provisions set forth in 310 CMR 80.43

Please feel free to contact Patrice Plante at 781-952-6079 or at pplante@vertexeng.com for additional information.

Sincerely,

Patrice A. Plante
Project Manager

Jonathan Noris, P.E.
Vice President

IN BOARD OF SELECTMEN

At 2 P.M. a public hearing was held on the application of Pine Manor Junior College for a license for the keeping, storage and use of gasoline in one underground tank of 500 gallons capacity at 400 Heath Street, Brookline.

It appeared that due notice of the hearing had been given in accordance with the provisions of law. The applicant was represented by Mr. Paul T. Kirk, Comptroller, Pine Manor Junior College. No one appeared to object and the hearing was closed.

On motion, it was unanimously

VOTED: To grant a license to Pine Manor Junior College (William P. Person, Vice-President for Operations) for the keeping, storage and use of gasoline in one underground tank with a total capacity of 500 gallons at 400 Heath Street, subject to the condition that the requirements of the Town Building Code and the regulations of the Division of Fire Prevention of the Commonwealth of Massachusetts be complied with.

A t t e s t:

Richard T. Leary

Secretary, pro tem.

Pine Manor Junior College
